MARBLE SPLEEN DISEASE I--BIBLIOGRAPHY

by

John N. Stuht

ABSTRACT

A literature search uncovered fifteen references to marble spleen disease.

INTRODUCTION

References found during routine literature searches are not all cited in research reports. As the first in a series of short notes on marble spleen disease, I've prepared a bibliography for those who may wish to pursue aspects of the disease not included in future papers.

METHODS AND MATERIALS

The following publications were searched for articles on marble spleen disease: agriculture, biology, and environmental sciences issues of Current Contents from January 1976 to August 1977; Biological Abstracts and International Abstracts of Biological Sciences 1972 to 1977 using microbiology, viruses, pheasants, and marble spleen disease as key words; Index Veterinarius 1972 to June 1977 using pheasants and marble spleen disease as key words; Virology Abstracts 1972 to June 1977 using marble spleen disease as a key word. In addition, literature citation sections of articles found in the abstracting journals were cross checked for new references and the last issues of journals in which recent previous papers had appeared were examined for articles that may not have been abstracted.
RESULTS AND DISCUSSION

Fifteen references were found. Most were either publications in scientific journals or papers presented at meetings. The list may not be complete, but its shortness clearly shows we know very little about marble spleen disease.
