

# Compartment Review Presentation

Atlanta Forest Management Unit

Compartment 54095

Entry Year 2026

Acreage: 1,425

County: Alpena

Management Area: Huron Sandy Lake Plain

---

**Stand Examiner:** Darrick Coy

## **Legal Description:**

T31N R05E, Sections 3, 10, and 15

## **Identified Planning Goals:**

Management goals and activities within Compartment 95 were guided using the Huron Sandy Lake Plain Management Area Plan. Forest management prescriptions took into account the unique characteristics of individual stands, possible effects on adjacent stands, the integrity of surrounding wetlands, the functioning of the greater landscape, and well-being of the Thunderbay River watershed and its wildlife inhabitants.

## **Soil and topography:**

The entire topography of Compartment 95 is flat. The soil in the northern 400 acres is composed of Deford muck with a thin strip of Au Gres-Deford Complex following the run-off through the center. The southern 1,000 acres is mostly Tacoda-Wakeley complex with a pocket of Deford muck to the northeast and Rollaway muck bordering the Thunderbay River to the south.

## **Ownership Patterns, Development, and Land Use in and Around the Compartment:**

Compartment 95 is bordered by state land to the west, southeast, and north. Private land divides the compartment into a north 400 acres and a south 1,000 acres. The compartment and surrounding land are wooded. Hunting camps are present on the adjacent private property.

## **Unique Natural Features:**

No Unique Natural Features known.

Contact Michigan Natural Features Inventory for more information or reporting. All proposed management activities have taken these concerns into consideration.

## **Archeological, Historical, and Cultural Features:**

No Archeological, Historical, or Cultural Features known.

Contact the State Historical Preservation Office for more information or reporting of new sites. All proposed management activities have taken these concerns into consideration.

## **Special Management Designations or Considerations:**

Due to the high-water table much of the land is not harvestable. The ability to regenerate a stand, due to wetness is a concern throughout the compartment. Flooding and conversion to non-forested wetland or poorly stocked stands is a concern. Effects on the Thunderbay River to the south were considered in management decisions on adjacent land. Beaver activity has increased over the years and some previously forested areas are now non-forest wetland.

## **Watershed and Fisheries Considerations:**

Fisheries Division was consulted in regard to the harvesting done along the Thunderbay River. The positive and negative effects of harvesting within 100 feet of the Thunderbay River on fish, wildlife, and all other species aquatic or terrestrial was considered in all related management decisions.

## **Wildlife Habitat Considerations:**

The primary focus of wildlife habitat management will be to address the habitat requirements identified for the listed featured species found in this compartment. These species include American woodcock, beaver, black bear, pileated woodpecker, ruffed grouse, snowshoe hare, wild turkey, white-tailed deer. Based on the selected featured species, some of the most significant wildlife management issues in the management area are the maintenance of young forest and large open grassland complexes; the retention of large, over-mature trees and snags; and the maintenance and expansion of hard mast and mesic conifer components.

## **Mineral Resource and Development Concerns and/or Restrictions**

No known potential exists for commercial production of metallic minerals in this part of the state. The closest known active

sand/gravel operations are more than three miles to the northwest and southeast. Potential for economic development sand & gravel in the compartment appears to be limited due to wetlands and distance to markets. The compartment is north of the Antrim Shale gas play, and the Antrim Shale is mostly absent here. No known potential exists for oil & gas from other known producing formations. One oil & gas test well was drilled in the area in 1973, and it was a dry hole. There has been no recent well permit activity nor oil & gas leasing activity involving State-owned mineral rights in or around the compartment.

#### **Vehicle Access:**

Vehicle access is available along the northern edge of the compartment along Long Rapids Road. Access is available to the southern portion of the compartment via the Alpena to Hillman Snowmobile Trail that runs along the north side of the Thunder Bay River. Access is limited from Long Rapids Road south into the compartment due to a high-water table and wet soils. Access is limited from the Alpena to Hillman Snowmobile Trail to the north into the compartment for the same reason. Wet ground in combination with private ownership make the central portion of the compartment only accessible through private property.

View the status of state forest roads open to use within the Michigan DNR interactive roads viewer website.

#### **Survey Needs:**

None known.

#### **Recreational Facilities and Opportunities:**

The Alpena to Hillman Snowmobile Trail utilizes the former D & M railroad grade. Hunting opportunities are available throughout and are only limited by the compartment's limited accessibility.

View the status of state forest roads and trails open to motorized and non-motorized use within the Michigan DNR interactive road and trail viewer websites.

#### **Fire Protection:**

Fire protection to Compartment 95 is provided through the Atlanta and Alpena DNR Offices. The cover types throughout this compartment make these grounds a low fire risk for intense wildland fire.

#### **Additional Compartment Information:**

Harvests in the central region of Compartment 95 will depend on the cooperation and permission of private landowners.

#### **The following reports from the Inventory are attached:**

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

#### **The following information is displayed, where pertinent, on the attached compartment maps:**

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

**Report 5 – PROPOSED SPECIAL CONSERVATION AREA\* (SCA) DETAILS**

\* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
Long Rapids Road Vernal Pool	Spring Wetlands Riparian Area	Vernal Pool	SCA	1
<b>Comments</b>				
There is a vernal pool here that a perennial stream/somewhat seasonal run-off goes through.				

### Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

\* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area  
HCVA = High Conservation Value Area  
SCA = Special Conservation Area

Conservation Area	Type	Description
-------------------	------	-------------

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																																																															
<b>1</b>	6115 - Lowland Ash	Sapling Poor	85.7	20	1-50	N/A	2023-24 inventory comment- A wall of lowland shrub throughout. This stand was likely cut 57 years ago and is poorly stocked due to high water table and high lowland shrub presence. Merged and averaged canopy and subcanopy data from adjacent similar adjacent stands 1, 11,10, and portions of stand 2. These stands had the same cover type coding, overall size class, age, density, imagery texture and color, and compositions dominated by ash. Ash canopy species reduced to sapling size and 57 years to 20 years in age due to significant emerald ash borer mortality within the compartment and surrounding area.

<b>2</b>	6112 - Lowland Aspen	Poletimber Poor	12.3	44	1-50	N/A	2023-2024 inventory comment- Clearcut cutting record 133-77A bought by Wesley Thiem complete 10-20-1980 for 125 acres- volume (851 cds aspen, 1,172 cds red maple, 531 cds black ash, 10 cds birch, 20 cds mswd). The sale area includes current forested and non-forested stands 2, 104, 7, 10, 12, 13, 14, 16, 25, and 30. Changed stand age from 57 to 44 based off cutting record. Stand not visited during YOE 2026 field inventory due to poor access, unseasonably warm temps, deep standing water, unfrozen ground at time of survey, and/or workload time constraints. Original field survey done fall-winter 2013-14. Green ash canopy species reduced from 80% to 5% due to significant emerald ash borer mortality within the compartment and surrounding area. Ash canopy percentages proportionately distributed among remaining tree species.

19	6230 - Cattail	Nonstocked	7.0			No	2023-2024 inventory comment- Stand not visited during YOE 2026 field inventory due to poor access, unseasonably warm temps, deep standing water, unfrozen ground at time of survey, and/or workload time constraints. Original field survey done fall-winter 2013-14.																																								
20	6113 - Lowland Maple	Sawtimber Well	12.5	96	111-140	N/A	2013-2014 comment- This stand has a stream running through the center of it. Most ash have been affected by EAB and are on their way to dying. Traces of large silver maple are present. The understory varies from dense to almost non-existent. Overall, the understory is very sparse. The stream runs through a vernal pool/flooded area at north end of the stand.  2023-24 comment- merged stand 21 with this stand due to similar age, cover type, composition, and log size. Averaged ages of 106 and 86 for overall age of 96 and cover type composition.

<b>51</b>	6113 - Lowland Maple	Sawtimber Well	61.8	95	111-140	N/A	2013-14 inventory comment- Trace healthy elm saplings in sparse amounts throughout the understory. Red maple dominates the NE half of the stand. Ash is dominate in the outside portion of the central region of the stand. Ash presence in the canopy and the understory increases as you move to the SW of the stand.  2023-2024 inventory comment- Stand not visited during YOE 2026 field inventory due to poor access, unseasonably warm temps, deep standing water, unfrozen ground at time of survey, and/or workload time constraints. Original field survey done fall-winter 2013-14. Green and black ash canopy species reduced from 10% to 5% due to significant emerald ash borer mortality within the compartment and surrounding area. Ash canopy percentages proportionately distributed among remaining tree species.

An 8 in. dbh red maple cored at 36 plus. (ave. 44 plus 2 for 46 years of age)  2023 inventory comment- 5 stick red maple, minimal standing water during snowmelt, only found in really wet black imagery areas. In black areas water is usually less than 1ftb deep during snowmelt.

<b>60</b>	6113 - Lowland Maple	Poletimber Poor	13.4	43	1-50	N/A	YOE 2016 comment- The subcanopy is a consistent layer of red maple with an average dbh of 3-4 in. and an age of 33 years (verified by coring 2, 4 in. dbh red maple that both counted 31 rings). YOE 2023 comment- It appears that there is a much lower amount of log red maple in this stand and less aspen as well. Changed this to an even aged stand with scattered log red maple. An interior tag alder stand 15 was broken out as well.

<b>64</b>	6112 - Lowland Aspen	Poletimber Poor	25.1	55		N/A	2013-2014 inventory comment- This stand is a borderline lowland shrub - tag alder/willow non-forested stand. The size, density, and species composition of the canopy varies throughout the stand, therefore the age of the canopy trees were estimated relative to the ages of similar trees in adjacent stands.  2023-2024 inventory comment- D7 Treecutter FTP W5-662 record complete 02/1977 for 65 acres. Cut down all aspen, maple, elm, balsam fir during Jan-March. No access rd for timber harvesting. The FTP area includes current forested and non-forested stands 97, 64, and 67. Consider changing stand age from 55 to 47 based off FTP cutting record during YOE 2036 inventory. Stand not visited during YOE 2026 field inventory due to poor access, unseasonably warm temps, deep standing water, unfrozen ground at time of survey, and/or workload time constraints. Original field survey done fall-winter 2013-14. Black ash canopy species reduced from 10% to 5% due to significant emerald ash borer mortality within the compartment and surrounding area. Ash canopy percentages proportionately distributed among remaining tree species.

This stand was harvested in August of 2019 as part of Timber Sale Name: TBR Mile Mix; Timber Sale Number 54-026-16.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Bigtooth Aspen	50	Sapling	1	4	Tag Alder	Low	5 - 10 feet	Tall Shrub
Balsam Fir	10	Sapling	1					
Quaking Aspen	20	Sapling	1					
White Pine	10	Sapling	1					
Red Maple	10	Sapling	1					

merge with stand 81 once monitoring is closed

Conducted walkthrough regen survey on 1/31/24 with 5 inches of snow or less. White and red pine regeneration is mostly overtopped by aspen due to slower growth rate. Aspen is 6-8ft tall, rm is 3-5ft, conifers are .5-3ft tall. Medium stocking with aspen cover type. Some poor stocking scattered to the NE, should fill in with conifers. Original aspen, mixed conifer objective was achieved.

79 429 - Mixed Upland Conifers Sawtimber Medium 4.9 78 51-80 N/A

2013-14 comment- This stand borders the Thunderbay River.
