

Compartment Review Presentation

Sault Ste. Marie Forest Management Unit

Compartment 45188

Entry Year 2017

Acreage: 1,749

County Mackinac

Management Area: Milakokia Lake

Revision Date: 2015-08-04

Stand Examiner: Cory Luoto

Legal Description:

T43N-R12W Sections 25 - 28 & 34 & 35, Newton Township.

Identified Planning Goals:

Compartment 188 is located to the east of Milakokia Lake south of highway US-2. Age class diversity amongst the aspen stands in the compartment for wildlife and sustainable forestry is one of the main objectives for the compartment. Also, maintaining the public use areas like the State campground and the snowmobile trail are a high priority.

Soil and topography:

Many of the aspen types and some of the hardwood types are found on nearly level ground moraines, or on depressions in outwash plains and are either Menominee loamy sand or Spot Finch Complex. Lowland aspen types that are quite numerous in the compartment are on depressions in nearly level lake and outwash plains and are usually a Markey-Spot-Finch complex. The nicer hardwoods site are on undulating ground moraines and outwash plain and are a Heinz sandy loam. The large bog in the compartment is a Dawson and Loxley peat soils and is on a closed depression of a lake plain. The cedar types in the compartment are typically found on Markey and Carbondale mucks that sit on depressions in ground moraines and lake plains.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

The compartment borders small private landowners to the north and to the west. Great Lakes Rural NMTC Forestlands has ownership to the northeast of the compartment and the rest of the compartment is adjacent to other state ownership to the south and east. There are numerous cabins along Milakokia Lake and abut to the compartment boundaries to the west.

Unique Natural Features:

The compartment has the potential for numerous rare and endangered fauna and flora.

Archeological, Historical, and Cultural Features:

None.

Special Management Designations or Considerations:

The compartment has the potential for numerous rare and endangered fauna and flora.

Watershed and Fisheries Considerations:

Toms' Creek is classified as warm-water and the concern is limiting sedimentation that can enter this system.

Wildlife Habitat Considerations:

This compartment lies within the Milakokia Lake Management Area (MA). Featured species in the MA are American woodcock, Blackburnian warbler, red-shouldered hawk, and white-tailed deer. The compartment is dominated by lowland types ranging from lowland shrub/scrub to cedar and other lowland conifers as well as lowland deciduous (primarily poplar). Aspen is common in upland areas. Most stands are relatively young as a result of previous treatments, and provide habitat for ruffed grouse, woodcock, deer, and snowshoe hare. This compartment lies within a deer wintering complex along Milakokia Lake. Lowland conifer stands, particularly cedar, in this area provide important cover for wintering deer and will be left uncut.

Some other wildlife with the potential to benefit from the habitat in this compartment include woodpeckers, goshawk, bobcat, and black bear.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of peat and muck. The glacial drift thickness varies between 10 and 50 feet. The Silurian Burnt Bluff Group and perhaps a minor amount of Manistique Group subcrop below the glacial drift. The Burnt Bluff is quarried for stone/limestone two miles to the southwest (Pfizer Quarry) and in Section 25. There are gravel pits to the east, and there may be potential on the uplands. There is no current economic oil and gas production in the UP.

Vehicle Access:

The Pike Lake Grade (gravel county road) and Warner Road (paved county road) provide hard surface access to the western portion of the compartment with a small network of poor dirt roads branching off. The power line also provides access to some areas of the compartment; permission is needed from private landowner if hauling to the west. The northeast portion of the compartment is accessed through many different small landowners off US-2; permission is required for use of the roads.

Survey Needs:

None.

Recreational Facilities and Opportunities:

The compartment has the Milakokia Lake State Forest Campground on the east side of the lake. The campground is a maintained rustic campground with a boat launch and was updated to ADA standards along with other renovation. The eastern portion of the compartment has a snowmobile trail that is maintained and groomed. The compartment as a whole provides boating, fishing, hunting, trapping and hiking opportunities.

Fire Protection:

The central part of the compartment has limited equipment access due to the wet soil conditions. Thick organic soil will make fire fighting difficult and labor intensive.

Additional Compartment Information:

None.

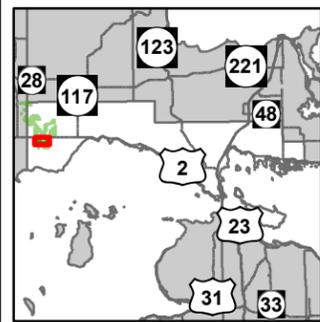

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 6 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
Milikokia Lake State Forest Campground	Concentrated Recreation Area	State Forest Campground	Proposed SCA	13
Comments				

Report 7 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
HCVA = High Conservation Value Area
SCA = Special Conservation Area

Conservation Area	Type	Description
-------------------	------	-------------

Stand	Sault Ste. Marie Mgt. Unit		Report 8 – Forested Stands			Compartment: 188	General Comments:
	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Year of Entry: 2017	
2	6112 - Lowland Aspen	Poletimber Well	22.7	40	81-110		A wet Mackinac Mix stand. Primarily aspen. Some pockets of higher ground. In these areas the trees are larger.
3	4130 - Aspen	Poletimber Well	12.6	40	51-80		Stand is just growing into a pole stand. Some areas have very little underbrush. Nice aspen.
5	4134 - Aspen, Spruce/Fir	Sapling Well	2.1	25	Immature		Stand is growing nicely. Very dense regeneration.
6	4112 - Maple, Beech, Cherry Association	Sawtimber Well	8.3	94	81-110		Stand was thinned in 2014. Lots of regeneration present.
7	4134 - Aspen, Spruce/Fir	Sapling Well	2.2	25	Immature		Nice aspen stand. Regeneration is quite dense yet in places.
11	4134 - Aspen, Spruce/Fir	Sapling Well	5.9	25	Immature		Decent aspen/spruce fir stand. Lots of rabbit sign.
13	42320 - Upland Spruce	Poletimber Medium	1.3	42	51-80		Thick spruce regeneration. Barely a pole stand. Lots of smaller stems.
15	6121 - Tamarack	Sapling Poor	4.3	15	Immature		This stand was a lowland shrub in the previous inventory but it has enough tamarack to be a forested stand now.
20	6112 - Lowland Aspen	Sapling Well	11.2	18	Immature		Stand was cut at the same time as stand 26 but this is a much wetter site. Regeneration is doing good.
22	4134 - Aspen, Spruce/Fir	Sapling Well	15.8	24	Immature		Regeneration is doing really good. Slightly larger than the stands to the north.
23	6112 - Lowland Aspen	Sapling Well	15.6	24	Immature		Wet aspen stand. Some patches of tag alder.
26	4130 - Aspen	Sapling Well	23.6	18	Immature		Stand was cut in 1997. Regeneration is doing really good.
27	4134 - Aspen, Spruce/Fir	Sapling Well	10.8	24	Immature		Stand was cut in 1991. It will be primarily poles next entry but mostly 2"-3" saplings now.
28	6122 - Black Spruce	Poletimber Medium	3.5	114	1-50		Wet, sparse black spruce. Look at harvesting in 30 years when the stand to the west can be cut again. The canopy varies from 5' tall to 40' tall.
31	6111 - Lowland Balsam Poplar	Poletimber Medium	7.6	72	51-80		Poor Quality, wet Mackinac Mix. Look at harvesting in ten years. The stand provides age class diversity in the area.
32	4140 - Other Upland Deciduous	Poletimber Medium	6.3	82	1-50		Access is a problem and too little volume to cut alone. Good for age class diversity.

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
33	4134 - Aspen, Spruce/Fir	Sapling Well	9.8	41	Unspecified	Stand is just transitioning into a pole stand. Very heavy balsam understory.
36	6120 - Lowland Cedar	Poletimber Well	2.1	119	111-140	Decent thermal cover for deer.
37	4117 - Mixed N. Hardwood - Pine	Sawtimber Well	13.4	96	81-110	Milikokia Lake State Forest Campground. Stand will be monitored for hazard trees and garlic mustard. We will work with Parks Division on management on stand.
38	6120 - Lowland Cedar	Sapling Medium	24.3	100	Unspecified	Wet, mixed stand. Lots of tag alder.
39	4130 - Aspen	Sapling Well	7.5	1	Immature	Cut in the winter of 2014. Regeneration is already a few feet high.
41	4319 - Mixed Upland Forest	Sapling Well	5.8	30	Immature	Young Mackinac mix stand that is heavier towards conifers. Stand is growing good.
43	4134 - Aspen, Spruce/Fir	Sapling Well	4.5	23	Immature	Regeneration is doing ok. Some open spots but not many.
44	6112 - Lowland Aspen	Poletimber Medium	1.7	64	51-80	Only stand of mature trees in the area. Very Wet. Stand should be left for age class diversity.
48	4134 - Aspen, Spruce/Fir	Sapling Well	41.7	1	1-50	Stand was cut in 2014. Regeneration is already 5' tall and doing good.
50	4134 - Aspen, Spruce/Fir	Sapling Well	19.7	18	Immature	Cut in 1997. Stand is doing great now.
54	4134 - Aspen, Spruce/Fir	Sapling Poor	9.7	1	Immature	Stand was cut in 2014. Regeneration is already 5' tall and doing good.
57	6122 - Black Spruce	Poletimber Poor	2.3	114	1-50	Very small, sparse black spruce. Some bigger ones but few and far in between.
59	6120 - Lowland Cedar	Poletimber Well	6.1	119	111-140	Decent deer cover, fairly dense.
61	6120 - Lowland Cedar	Poletimber Well	24.5	119	111-140	Decent cedar with pocket of tag alder.
63	4138 - Aspen (OI)	Sapling Well	37.7	24	Immature	Land owner to the north denied access. OPIC - FMD: Aspen is about 20ft tall and 3" in diameter. Thick regeneration.
64	41199 - Northern Hardwood (OI)	Sawtimber Well	6.1	178	51-80	Stand was thinned in 2010. Land owner to the north denied access.

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
65	6122 - Black Spruce	Poletimber Well	5.3	114	51-80	Stand is part of a treed island out on a bog. Pretty healthy looking. Only snowmobiled up to the edge.
66	4140 - Other Upland Deciduous	Poletimber Medium	8.5	85	51-80	Part of an island in a bog. I snowmobiled up to the edge.
75	6111 - Lowland Balsam Poplar	Poletimber Poor	3.7	84	1-50	Stands were mostly unmerchantable when surrounding stands were cut in 1997. They provide a little diversity now.
76	4134 - Aspen, Spruce/Fir	Sapling Well	5.2	18	Immature	Stand was cut in 1997. Regeneration is doing good.
77	6118 - Lowland Deciduous with Cedar	Poletimber Poor	38.2	74	1-50	OPIC - FMD: Too wet to cut, BAM is dying out. Lots of Tag Alder.
78	6111 - Lowland Balsam Poplar	Poletimber Poor	11.3	71	1-50	Unmerchantable portions of stand that were not cut in 1997. Small islands now that add diversity.
79	6112 - Lowland Aspen	Sapling Well	184.4	18	Immature	Stand was cut in 1997. Last inventory the regeneration was a little sparse. It is now fully developed and doing great.
80	4112 - Maple, Beech, Cherry Association	Sawtimber Well	51.1	102	51-80	Stand was thinned pretty hard in 1997. It will at least another entry before it is ready to harvest again.
81	4137 - Aspen, Birch	Sapling Well	28.6	18	Immature	Last entry regeneration was a bit spotty but it is doing great now. Stand seems to have slightly more aspen than birch now.
82	6120 - Lowland Cedar	Poletimber Well	97.6	107	51-80	Variable cedar stand. Larger diameter and higher density to the north. Some cedar regeneration, but it is all below the snowline.
83	42320 - Upland Spruce	Poletimber Medium	6.8	85	51-80	Small upland island in the swamp. Offers nice diversity in the area. Look at harvesting when the maple stand to the southwest is ready to harvest again.
84	6122 - Black Spruce	Poletimber Medium	5.5	77	1-50	Small diameter and low basal area black spruce. Nice little islands of trees in the swamp.
87	4138 - Aspen (OI)	Sapling Well	23.8	24	Immature	Land owner to the north denied access. OPIC - FMD: Aspen about 15' tall, 2" in diameter. Fairly thick regeneration. Quite a bit of B. Fir on south end of the stand
88	6123 - Lowland Fir	Sapling Well	6.4	5	Immature	Stand was cut in 2010. Heavy conifer regeneration is doing good. Some smaller cedar is doing good that wasn't cut.
90	4130 - Aspen	Sapling Well	27.5	5	Immature	Regeneration is doing good.
91	6120 - Lowland Cedar	Poletimber Well	9.1	107	51-80	Stand has a creek and a snowmobile trail going through it. Large, dense cedar. Really nice stand.

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
92	4130 - Aspen	Sapling Well	7.4	17	Immature	Stand was cut in 1998. The regeneration was spotty in the previous entry but it is doing good now.
93	4110 - Sugar Maple Association	Poletimber Well	14.8	91	51-80	Stand was thinned in 2010. Regeneration is doing good. Most of the beech was taken. Only a few scattered ones left.
94	4139 - Aspen, Mixed Deciduous	Sapling Well	10.6	26	Immature	Variable stand. More maple and cherry in some spots than others. The stand is primarily aspen
95	4130 - Aspen	Sapling Well	24.8	15	Immature	Scattered spruce and balsam. Very dense regeneration.
96	4130 - Aspen	Sapling Well	26.7	26	Immature	Regeneration doing very good. Some small balsam in the understory.
98	4112 - Maple, Beech, Cherry Association	Poletimber Well	1.7	74	51-80	Basal area is to low to harvest this entry. Should be ready in ten years. Very heavy balsam understory.
99	4134 - Aspen, Spruce/Fir	Sapling Well	18.6	16	Immature	Regeneration is doing great.
101	4130 - Aspen	Sapling Well	28.1	26	Immature	Stand look great. Next entry it should be small poles.
104	4134 - Aspen, Spruce/Fir	Sapling Well	7.1	5	Immature	Stand was cut in 2010. Regeneration is still spotty in the wetter spots but overall it is doing very good.
106	6112 - Lowland Aspen	Sapling Poor	6.4	5	Immature	Stand was cut in 2010. Regeneration is still a little spotty.
107	6120 - Lowland Cedar	Poletimber Medium	23.5	120	1-50	Leave for cover and buffer for creek.
108	6120 - Lowland Cedar	Poletimber Well	9.8	111	51-80	Leave for cover.
109	6122 - Black Spruce	Poletimber Medium	28.5	114	1-50	Small diameter black spruce. Low productivity on this site.
111	6111 - Lowland Balsam Poplar	Sapling Well	34.7	18	Immature	Regeneration was spotty last inventory but it is doing really good now.
113	6120 - Lowland Cedar	Poletimber Well	35.0	137	111-140	Very visible browse line. Not much for an understory.

Stand	Cover Type	Acres	Managed Site	General Comments:
