

Compartment Review Presentation

Shingleton Forest Management Unit

Compartment 41189

Entry Year 2022

Acreage: 1,950

County Alger

Management Area: Cusino Complex

Revision Date: 2020-05-08

Stand Examiner: Scott Kentner

Legal Description:

46N 17W Sections: 23, 24, 25, 26

Identified Planning Goals:

To manage for Wildlife habitat (Petrel deeryard) and timber production while providing recreational opportunities to the public.

Soil and topography:

Most of the compartment consists of relatively flat ground between Star and Commencement creeks on the Cusino Swamp Land Type Association (LTA); some areas in the southern part lie on the Shingleton Fen LTA. The majority of this compartment is low and relatively wet, allowing winteronly logging.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

There are a number of homes and other structures on the private lands along Star Siding Rd.

Unique Natural Features:

Dwarf billbery (*Vaccinium cespitosum*, state threatened plant), and Northern blue butterfly (*Lycaeides idas nabokovi*, state threatened) could occur in this compartment. Wood turtle (*Clemmys insculpta*, state special concern) could occur in and along Star Creek and Commencement Creek. There is also potential for nesting red-shouldered hawk (*Buteo lineatus*, state threatened) and Northern goshawks (*Accipiter gentilis*, state special concern) to occur throughout this compartment in stands of northern hardwoods, mature aspen, mixed swamp conifer, and swamp hardwoods.

Archeological, Historical, and Cultural Features:

none known.

Special Management Designations or Considerations:

Petrel deer wintering complex that is currently not being actively used by deer.

Watershed and Fisheries Considerations:

Fisheries Values - Good. All of the waters of the Star Creek system are classified Second Quality Cold Water, capable of supporting native brook trout. Commencement Creek, however, is classified Second Quality Warm Water, and there is no need to protect it from encroachment by beaver. Protection from increased sand bedload, however, is still a high priority.

Wildlife Habitat Considerations:

Compartment 189 lies within south eastern Alger county in the Grand Marais Sandy End Moraine and Outwash sub-subsection and is a part of the Cusino Complex Management area with American marten, moose, black bear, gray jay, northern goshawk, and white-tailed deer as featured species. The growing season is approximately 130 days. Extreme low winter temperatures near -35 degrees F and average annual snowfalls of 180 inches or more are common.

Pre-settlement vegetation was dominated by sugar maple, hemlock, yellow birch, white pine and beech in the uplands. Lowlands contained predominantly cedar with a mixture of tamarack, and black spruce. The compartment is bounded on the west by Star creek and on the east by Commencement creek. As such windthrow and beaver ponding were likely the primary forms of natural disturbance. Although the structure is most likely different, the species composition of the forest appears to be similar to that of pre-settlement times. This compartment constitutes the eastern portion of the Petrel deeryard.

Wildlife habitat management objectives include maintaining high biodiversity values within harvested stands. In northern hardwood stands, management will focus on the maintenance of mature trees, coarse woody debris, forest structure, hard and soft mast producers and mesic conifer retention. The Petrel deer wintering complex lies within portions of this

compartment so management for closed canopy lowland conifers and regenerating these species when possible will continue. Management of young successional forest types for browse and in stand retention of boreal forest types is also a priority. Other wildlife species of interest include blackburnian warbler, gray wolf, fisher, and bobcat.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of medium-textured glacial till and peat and muck. There is insufficient data to determine the glacial drift thickness. The Ordovician Prairie du Chien (PdC) and Black River Formation subcrop below the glacial drift. The PdC and Black River are used for stone/dolomite. The nearest gravel pit is in the SW NW of Section 25. There appears to be gravel potential on State lands along the north compartment boundary.

Vehicle Access:

Access to this compartment is from M-28 via Star Siding Rd., which is a county road. Access can also be from the North along the Petrel Road.

Survey Needs:

Recreational Facilities and Opportunities:

This compartment has comparatively good hunting for deer and grouse

Fire Protection:

Due to the wetness and timber type, fire is not a major concern within this compartment, but the wet ground may limit access to many areas in the event of a fire.

Additional Compartment Information:

The following reports from the Inventory are attached:

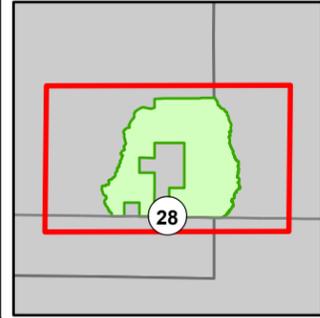

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

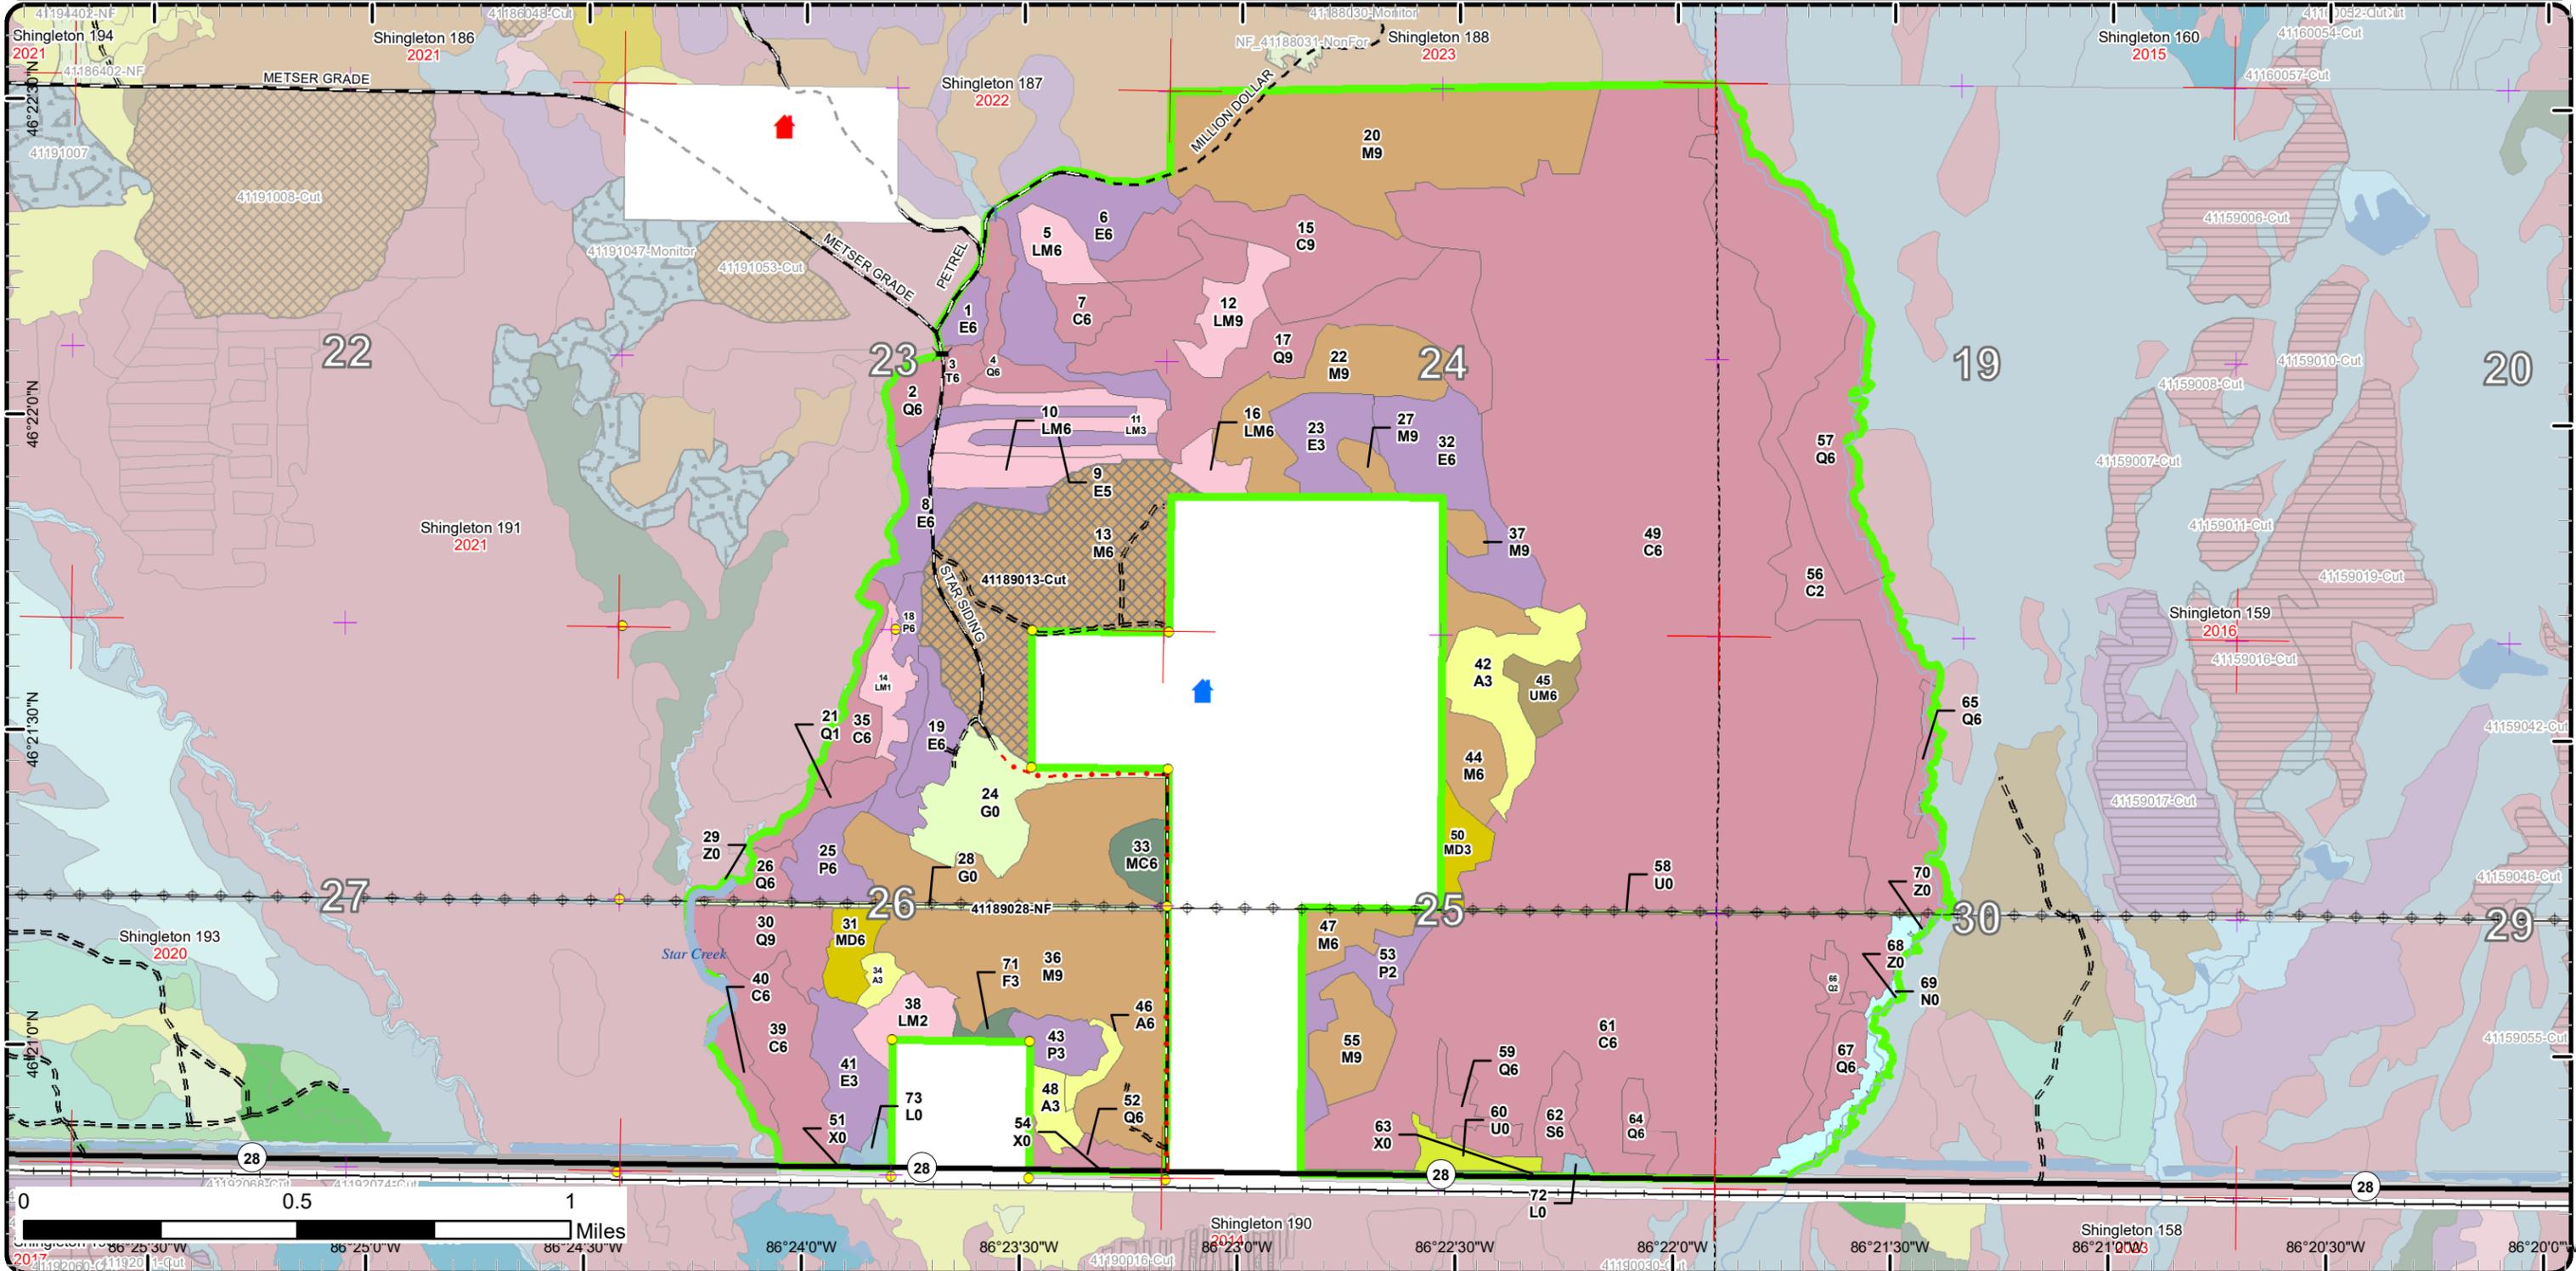

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
HCVA = High Conservation Value Area
SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Habitat Area	An area that provide some specific need for the life cycle of wildlife species, including State Wildlife Areas and Waterfowl Production Areas, deer wintering complexes in lowland conifer communities, grassland openings and savannas. Habitat areas are distinct from critical habitat designated for recovery of endangered or threatened species (such as Kirtland's warbler or piping plover areas) in that they are more general in nature, are not primarily associated with threatened or endangered species, and are not covered by species recovery plans that are developed in cooperation with Federal agencies.
ERA	Ecological Reference Areas	Ecological Reference Areas (ERAs) are high quality examples of natural communities that have been identified as Element Occurrences (EOs) by the Michigan Natural Features Inventory (MNFI) within the context of their natural community classification system. Element Occurrences with viability ranks of A (Excellent) or B (Good) and a Global (G) or State (S) element (rarity) ranking of endangered (1), threatened (2), or rare (3) serve as an initial base of ERAs. They may be located upon any ownership in the State. The system is comprised of individual or associations of natural community types that are managed for restoration and maintenance of natural ecological processes and values. The public may submit recommendations for lands as ERAs using the DNR Conservation Area Recommendation Form.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments

14 6139 - Mixed Lowland Forest Sapling Poor 9.0 13 1-50 N/A Harvested in 2005-2008. Everything was cut except hemlock, white pine, and aspen. 50-100 ft. bufferstrip was left along Star Creek. Stand is prescribed to be handplanted with cedar seedlings (but was never treated) and aspen regeneration is discouraged, but acceptable. Single clumps of cedar were left with some birch, spruce, and red maple scattered about. Conifer regeneration is flourishing. 2019: cedar regent looks good, with most trees 1 to 3 ft tall.

63 122 - Road/Parking Lot Nonstocked 4.5 No M-28

64 6124 - Lowland Spruce-Fir Poletimber Well 6.3 54 81-110 N/A Stand contains mostly spruce, tamarack, and cedar. Basal area varies within this stand.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Red Maple	8	Pole/Sapling	5		Red Maple	Low	Variable	Sapling
Paper Birch	5	Pole/Sapling	6		Balsam Fir	Low	Variable	Sapling
Quaking Aspen	5	Pole/Sapling	7		Black Spruce	Low	Variable	Sapling
Balsam Fir	5	Pole/Sapling	6		Tag Alder	Medium	< 5 feet	Tall Shrub
Black Spruce	47	Pole/Log	9	54				
Northern White Cedar	14	Pole	6					
Tamarack	13	Pole	9					
White Pine	3	Log/Pole/XLog	12					

65 6128 - Lowland Coniferous, Mixed Deciduous Poletimber Well 5.1 71 1-50 N/A This is a mixed conifer stand on the west bank of Commencement Creek.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Paper Birch	14	Pole/Sapling	5		Paper Birch	Low	Variable	Sapling
Quaking Aspen	8	Sapling/Pole	4		Quaking Aspen	Low	5 - 10 feet	Sapling
Black Spruce	28	Pole	6	71	Black Spruce	Medium	Variable	Sapling
Northern White Cedar	11	Sapling	3		Northern White Cedar	Medium	5 - 10 feet	Sapling
Tamarack	14	Pole	6		Tamarack	Low	Variable	Sapling
White Pine	16	Log	12		Black Ash	Low	5 - 10 feet	Sapling
Black Ash	9	Sapling/Pole	2		Tag Alder	Medium	< 5 feet	Tall Shrub

66 6129 - Mixed Coniferous Lowland Forest Sapling Medium 9.9 71 81-110 N/A A mixed coniferous stand. The overstory is dying out, maybe due to wet conditions.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Paper Birch	6	Pole/Sapling	5		Black Spruce	Medium	Variable	Sapling
Black Spruce	38	Sapling/Pole	4	71	Northern White Cedar	Low	< 5 feet	Sapling
Northern White Cedar	27	Sapling/Pole	4		Black Ash	Low	Variable	Sapling
Tamarack	24	Sapling/Pole	4		Tag Alder	Full	< 5 feet	Tall Shrub
Black Ash	5	Sapling/Pole	2					

67 6129 - Mixed Coniferous Lowland Forest Poletimber Well 6.5 81 1-50 N/A This is a spruce stand containing low basal area and tree size. It is located on the west bank of Commencement Creek.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Paper Birch	9	Pole/Sapling	5		Paper Birch	Low	Variable	Sapling
Black Spruce	32	Pole/Sapling	5	81	Black Spruce	Low	< 5 feet	Sapling
Northern White Cedar	26	Pole/Sapling	5		Northern White Cedar	Medium	10 - 20 feet	Sapling
Tamarack	23	Pole	8		Tamarack	Low	Variable	Sapling
White Pine	10	Log	10		Tag Alder	Full	< 5 feet	Tall Shrub
