

**Central mudminnow (*Umbra limi*)**

**Habitat:**

- feeding - undisturbed clear, low-gradient streams or rivers and lakes and impoundments
- organic debris, muck, or peat substrates
- aquatic vegetation

spawning - floodplain areas, on vegetation

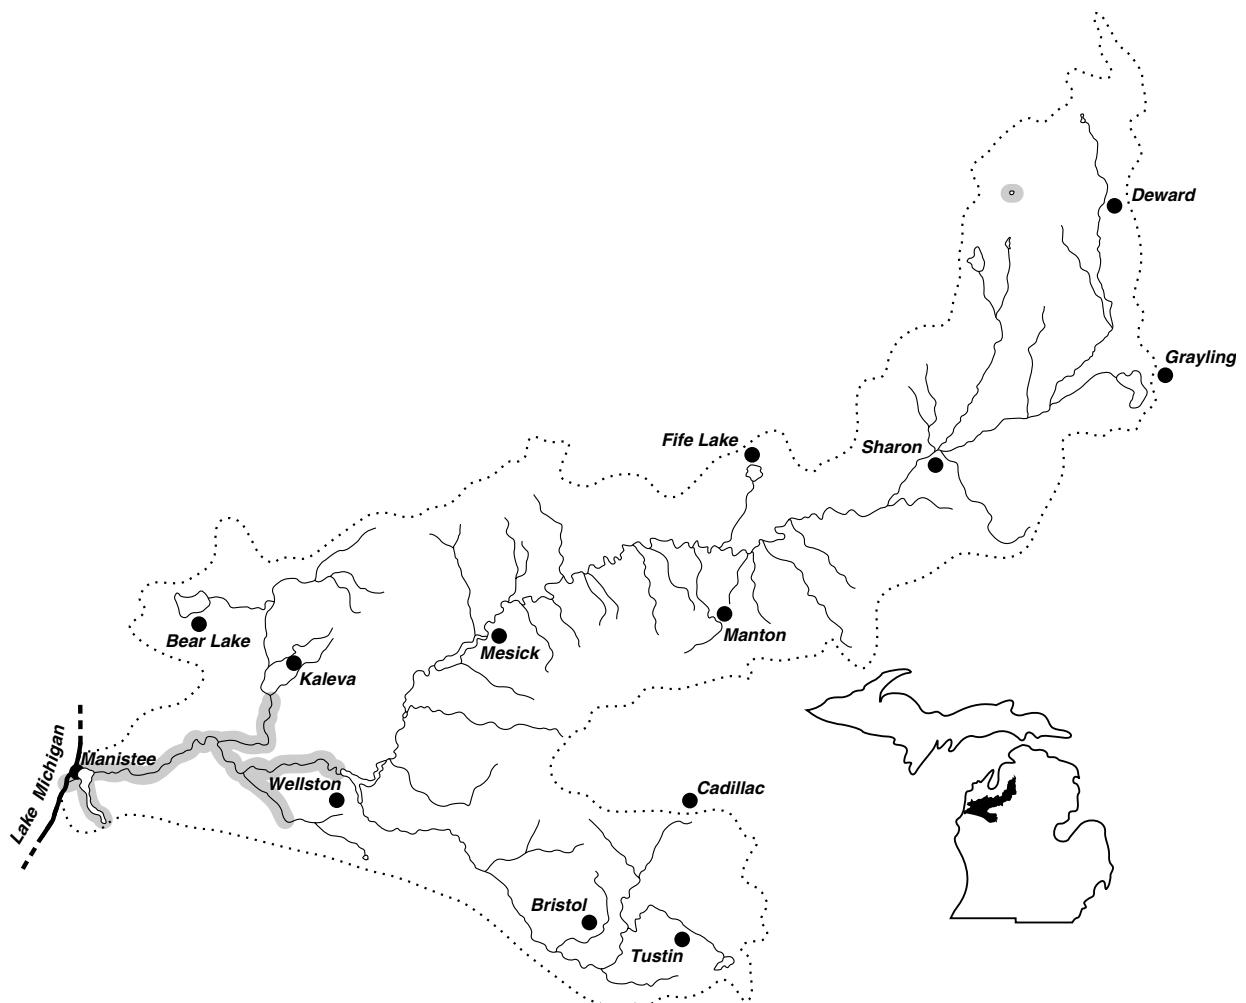

### Rainbow Smelt (*Osmerus mordax*)

#### Habitat:

feeding - midwater of lakes; 42-192 ft. in Lake Michigan

spawning - in streams or off-shore shoals in Lake Michigan  
- gravel substrate  
- swift current

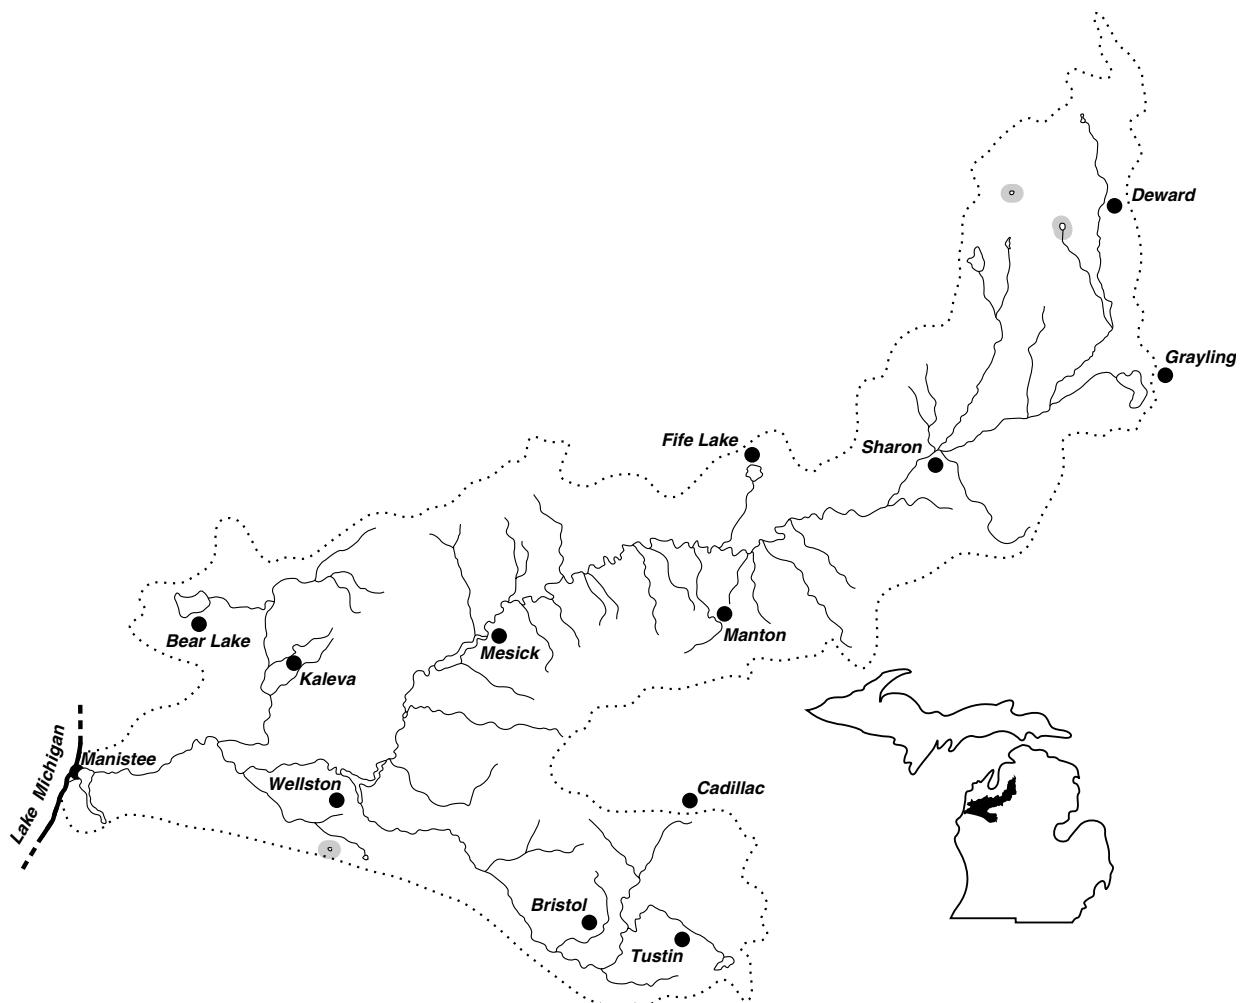

### Cisco {Lake herring} (*Coregonus artedi*)

#### Habitat:

feeding - deep cool lakes, preferably oligotrophic

spawning - usually in lakes

- 3 to 6 feet of water with no vegetation
- often over gravel or stony substrate

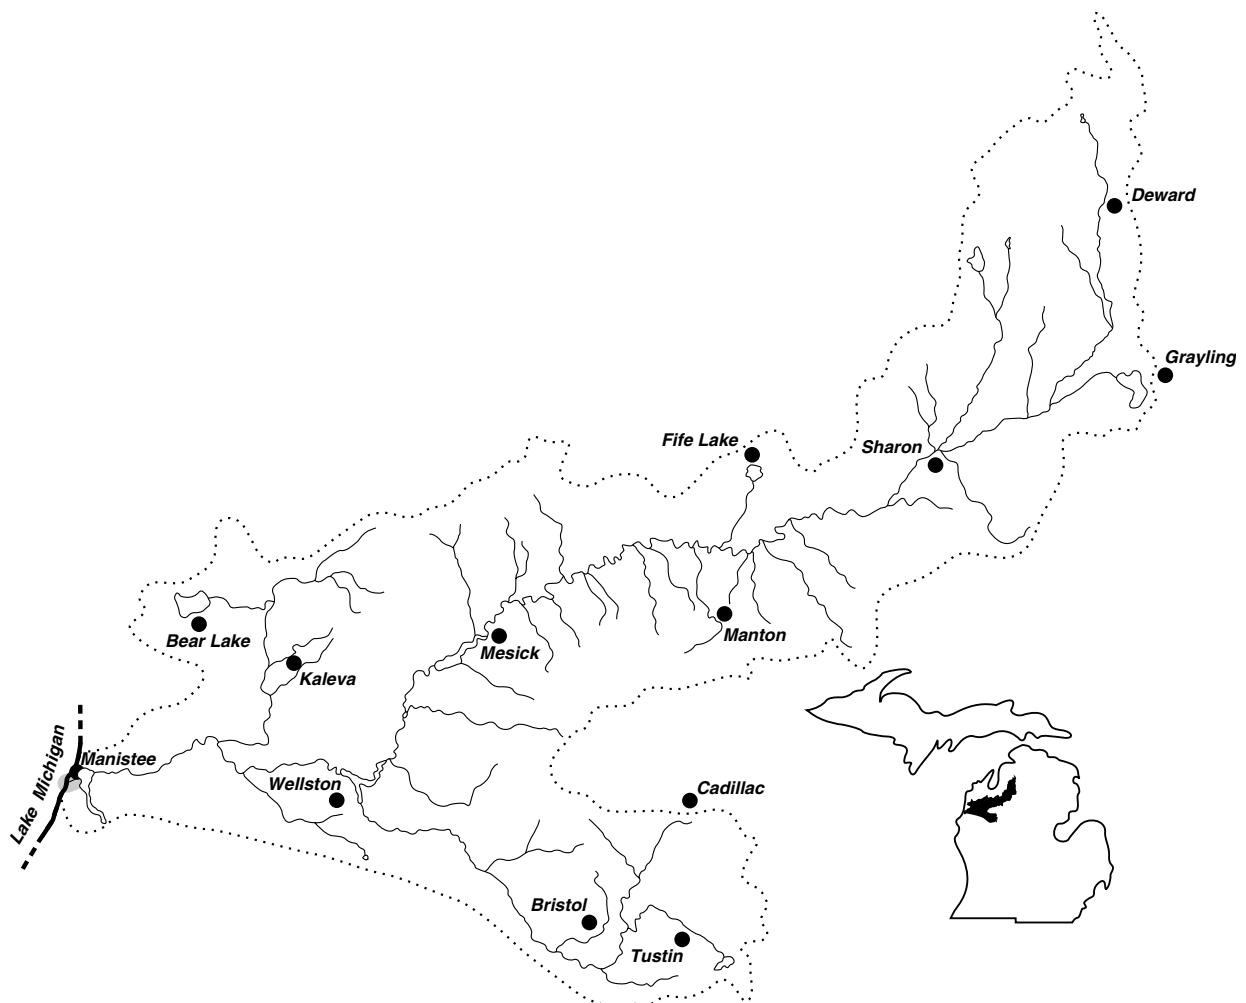

### Lake Whitefish (*Coregonus clupeaformis*)

#### Habitat:

feeding - large cool water; Lake Michigan  
- shallow water (for coregonids; 55-105 ft.)

spawning - cold shallow water (<25 ft.)  
- hard, stony, or sand substrate

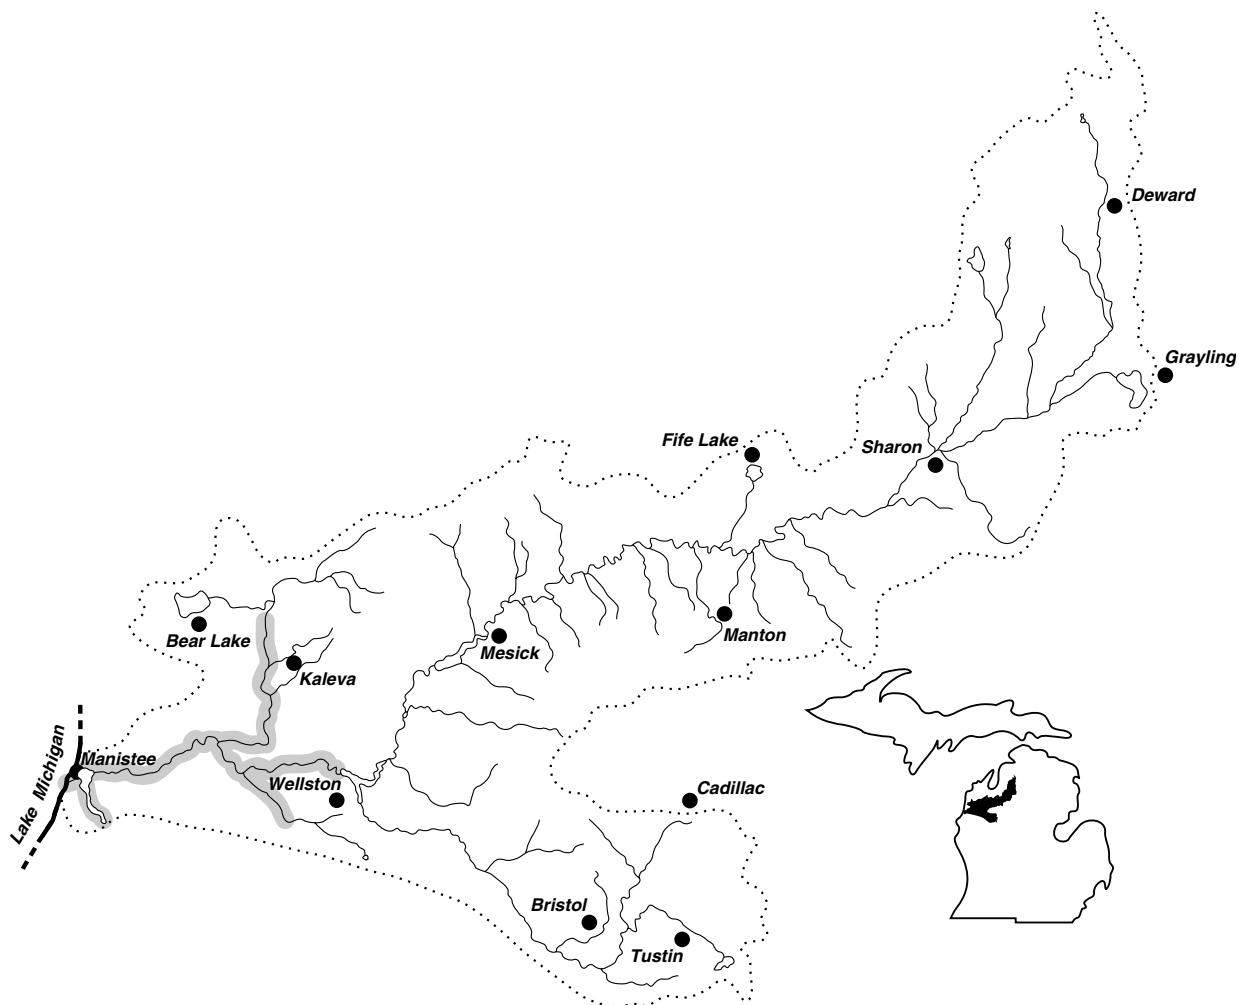

**Pink salmon (*Oncorhynchus gorbuscha*)**

**Habitat:**

feeding - large cold deep lakes - Lake Michigan

spawning - gravel substrate in rivers  
- female prepares and guards nest until death

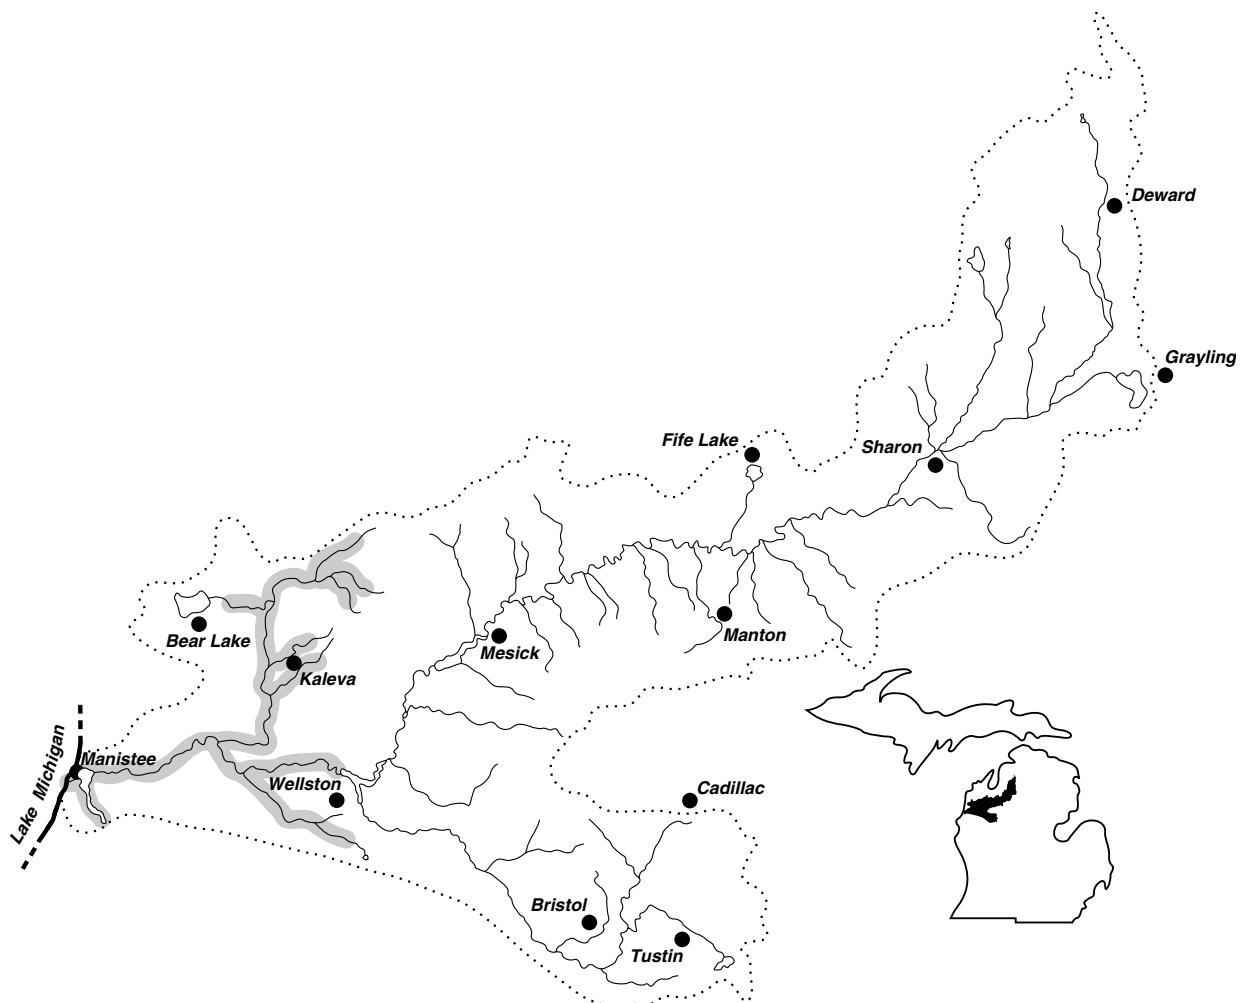

**Coho salmon (*Oncorhynchus kisutch*)**

**Habitat:**

feeding - adults: Lake Michigan  
- young: shallow gravel substrate in cold streams, later into pools

spawning - cold streams and rivers  
- swifter water of shallow gravelly substrate

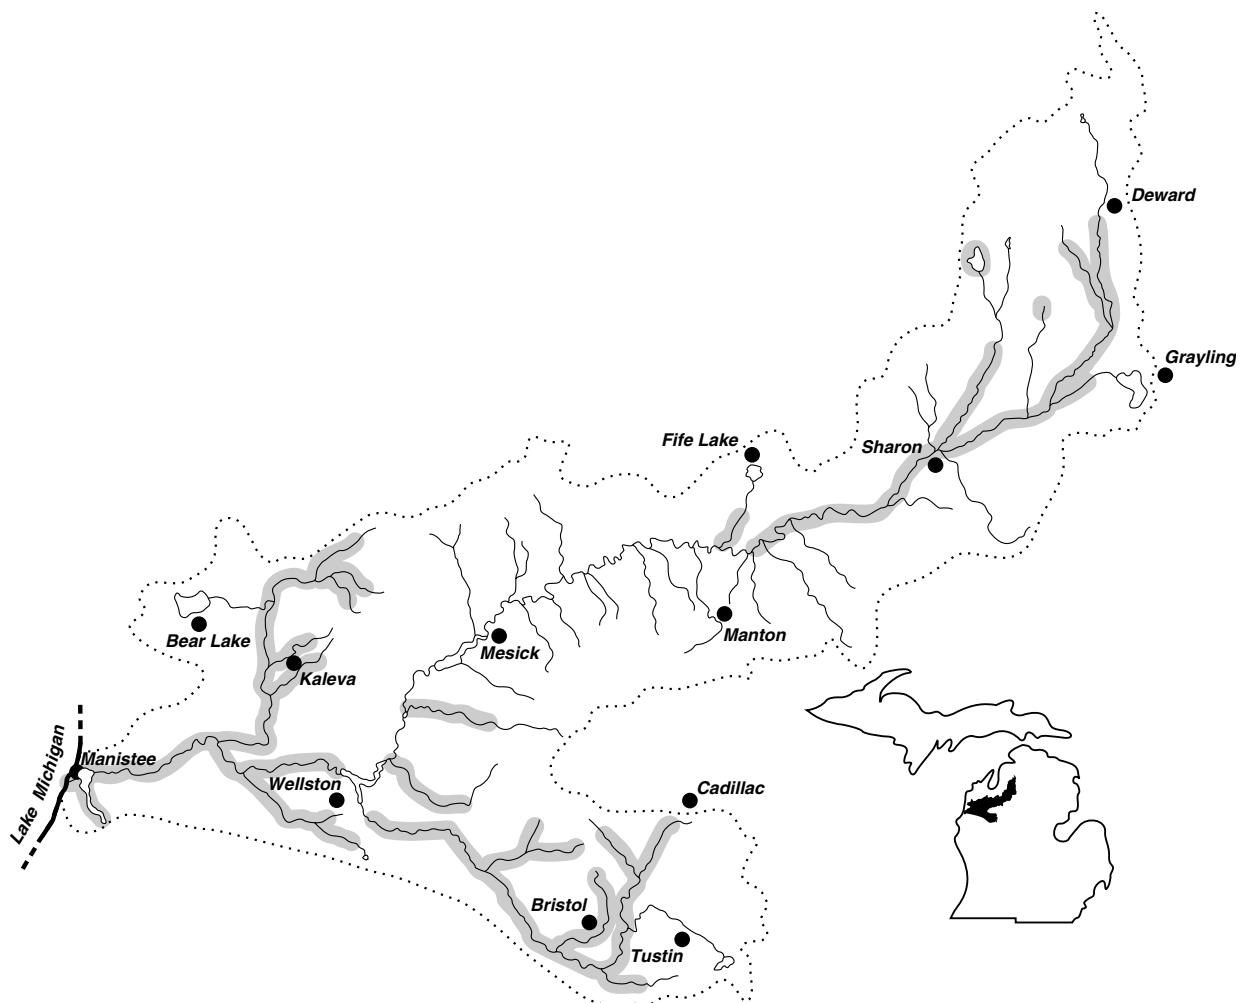

**Rainbow trout (*Oncorhynchus mykiss*)**

**Habitat:**

feeding - cold clear water of rivers and Lake Michigan  
- moderate current

spawning - gravelly riffles above a pool  
- smaller tributaries

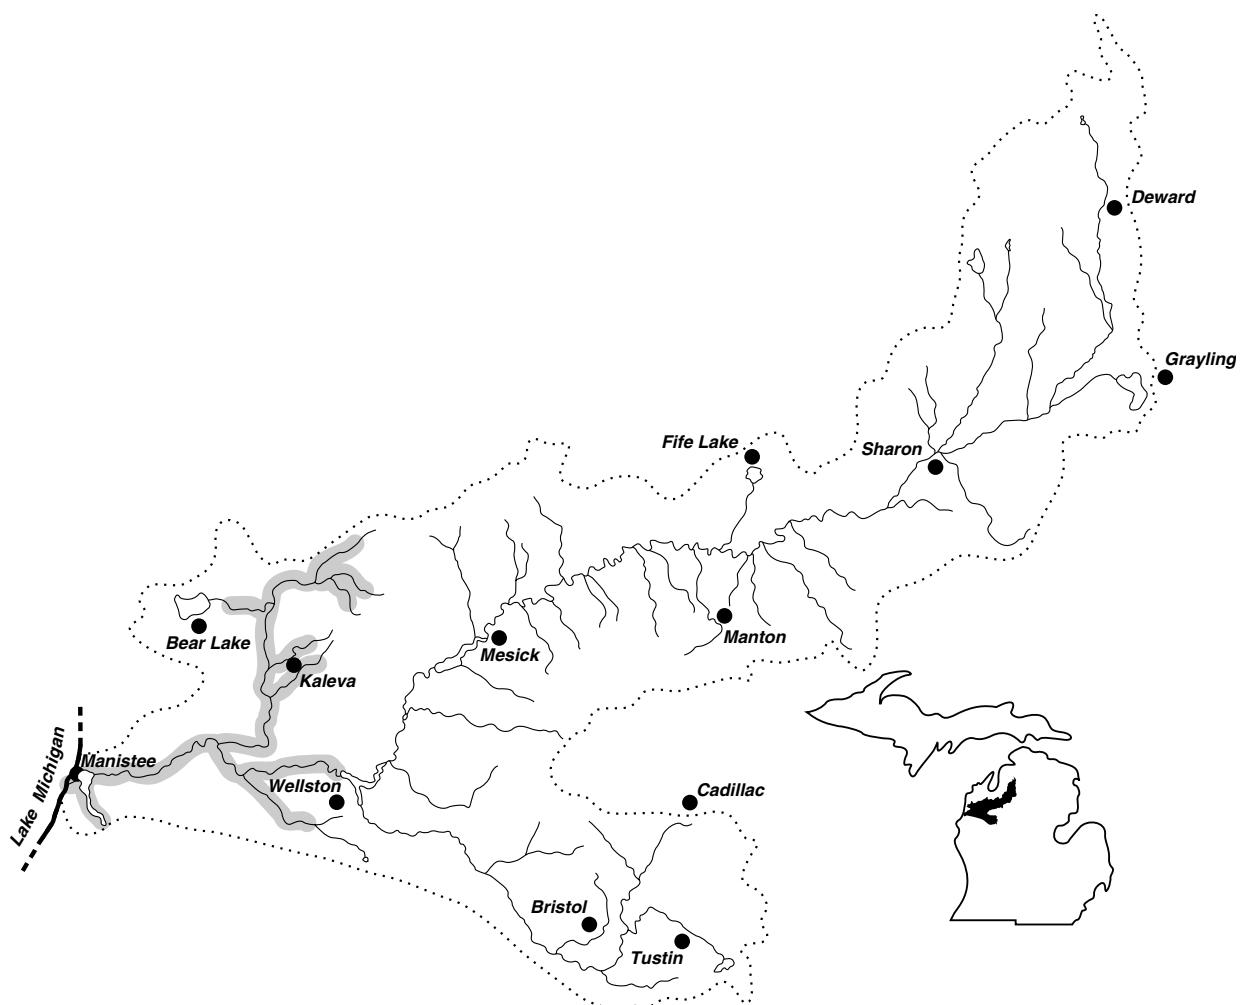

**Chinook salmon (*Oncorhynchus tshawyscha*)**

**Habitat:**

feeding - adults: Lake Michigan  
- young: shallow gravel substrate in cool streams, later into pools

spawning - gravelly substrate in cool streams

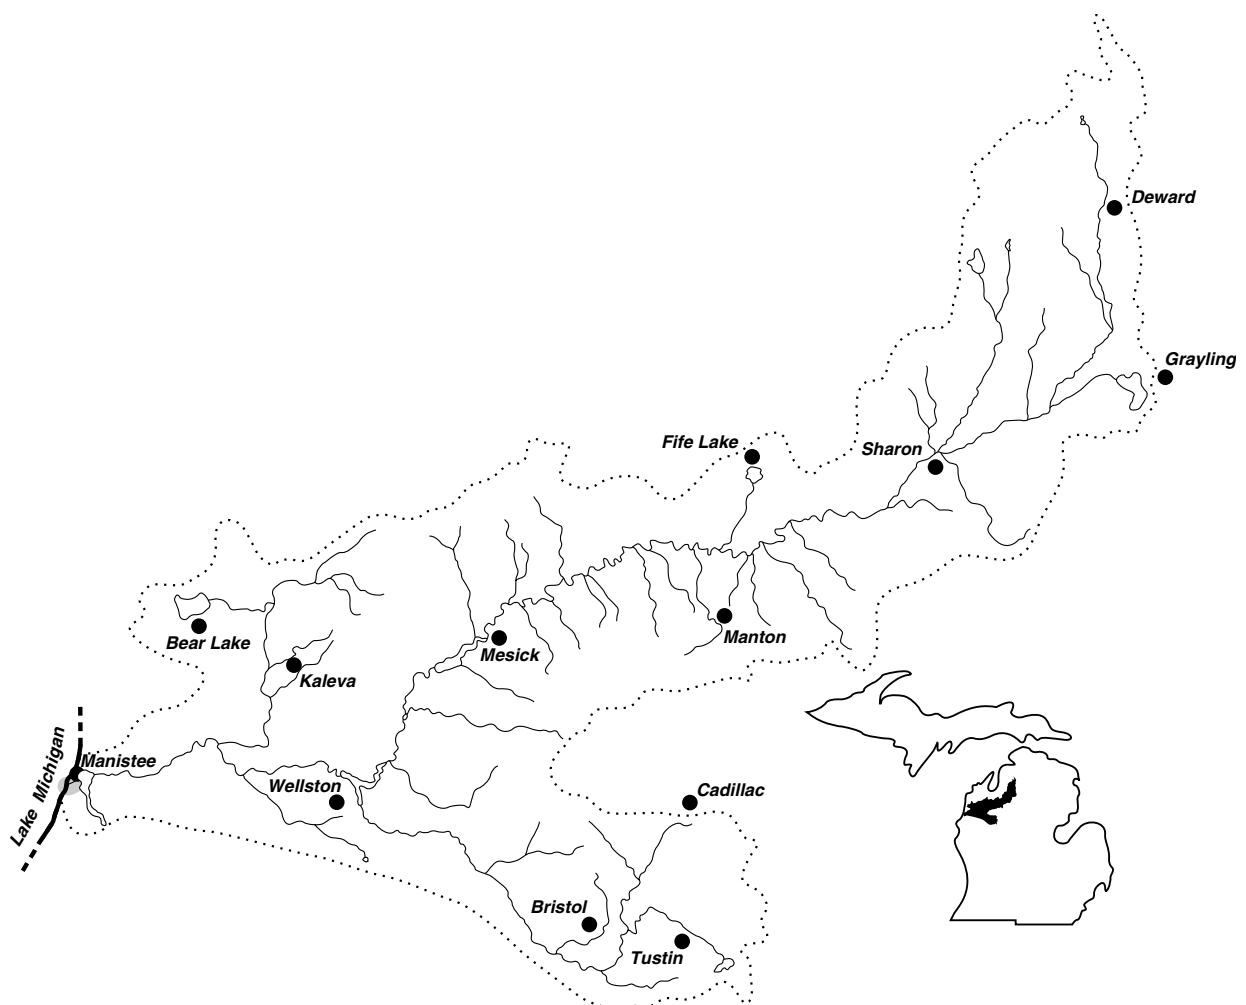

**Round whitefish (*Prosopium cylindraceum*)**

**Habitat:**

feeding - lakes, rivers, and streams

spawning - shallows of lakes and rivers  
- gravel or rock substrate

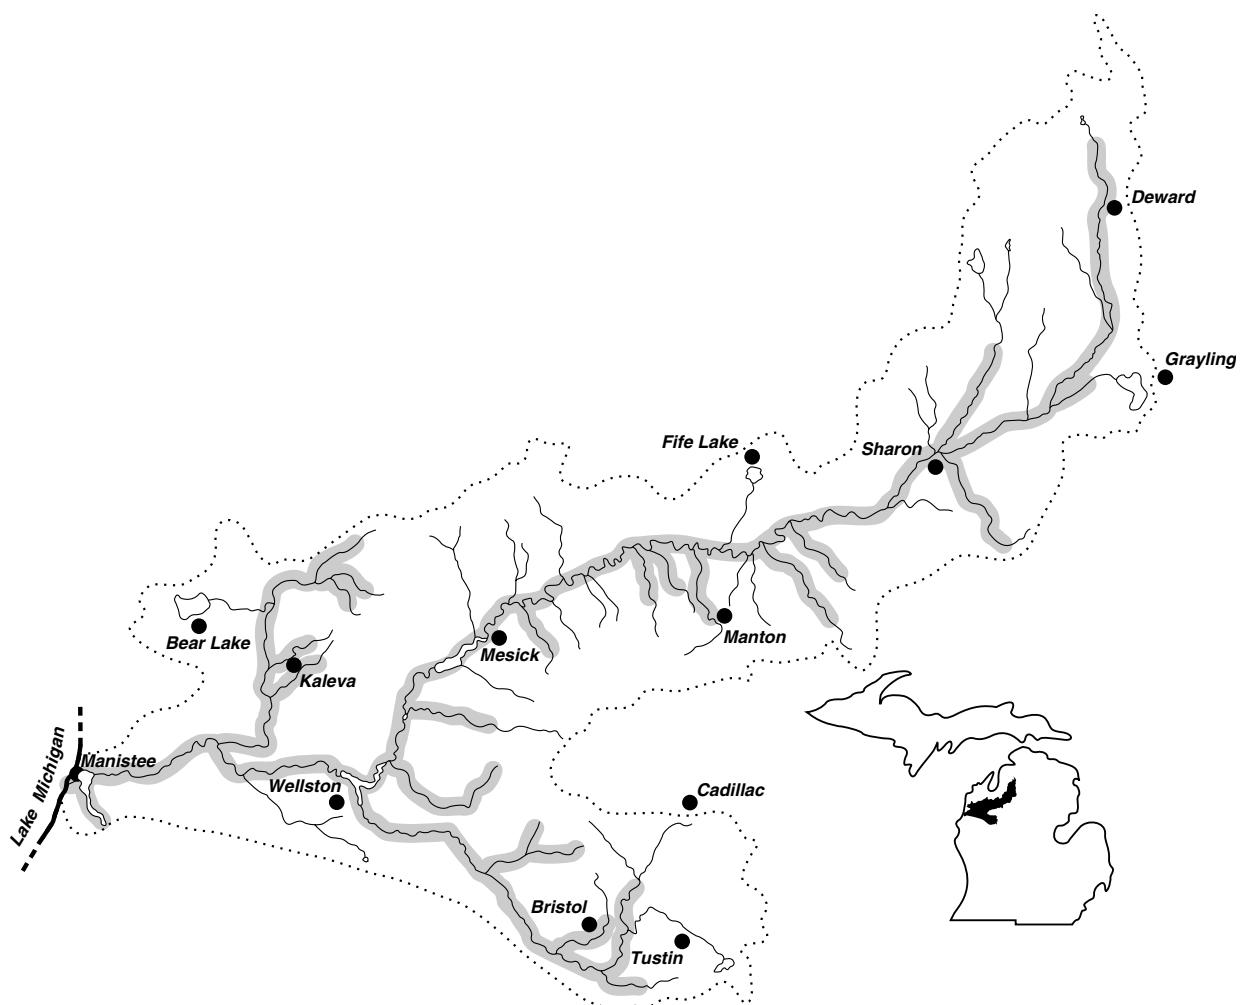

**Brown trout (*Salmo trutta*)**

**Habitat:**

- feeding - cold, clear streams, rivers, and lakes (not  $>72^{\circ}\text{F}$ )  
- medium to swift current in streams  
- does not tolerate silt well  
- prefers few individuals and species around  
- abundance of aquatic and land insects

- spawning - gravelly riffles; shallow headwater areas

**Brook trout (*Salvelinus fontinalis*)**

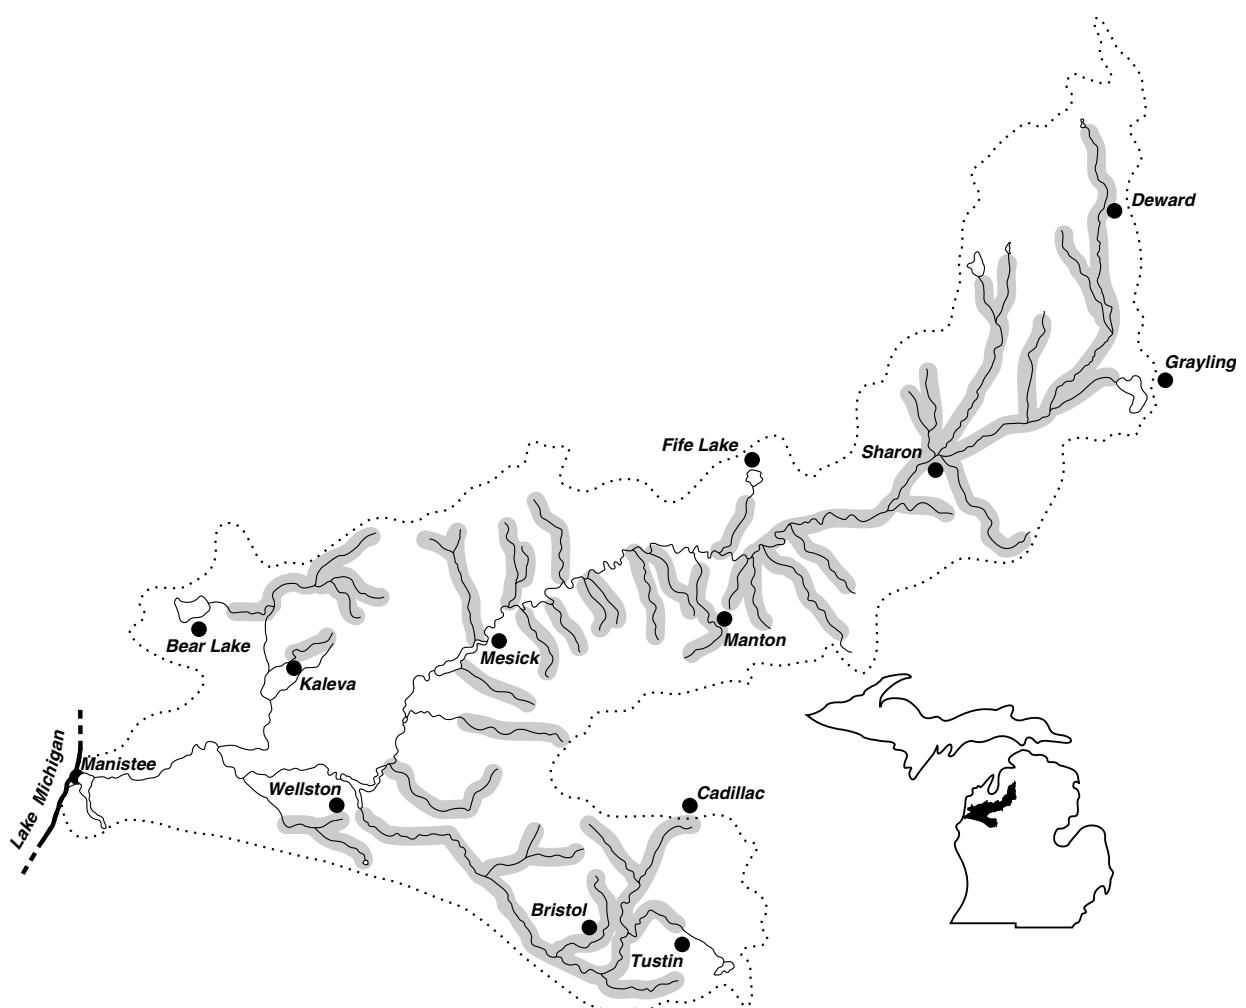

**Habitat:**

feeding - cold, clear streams, rivers, and lakes (not  $>72^{\circ}\text{F}$ )

- low current

- well oxygenated water

spawning - gravelly riffles; shallow or headwater streams

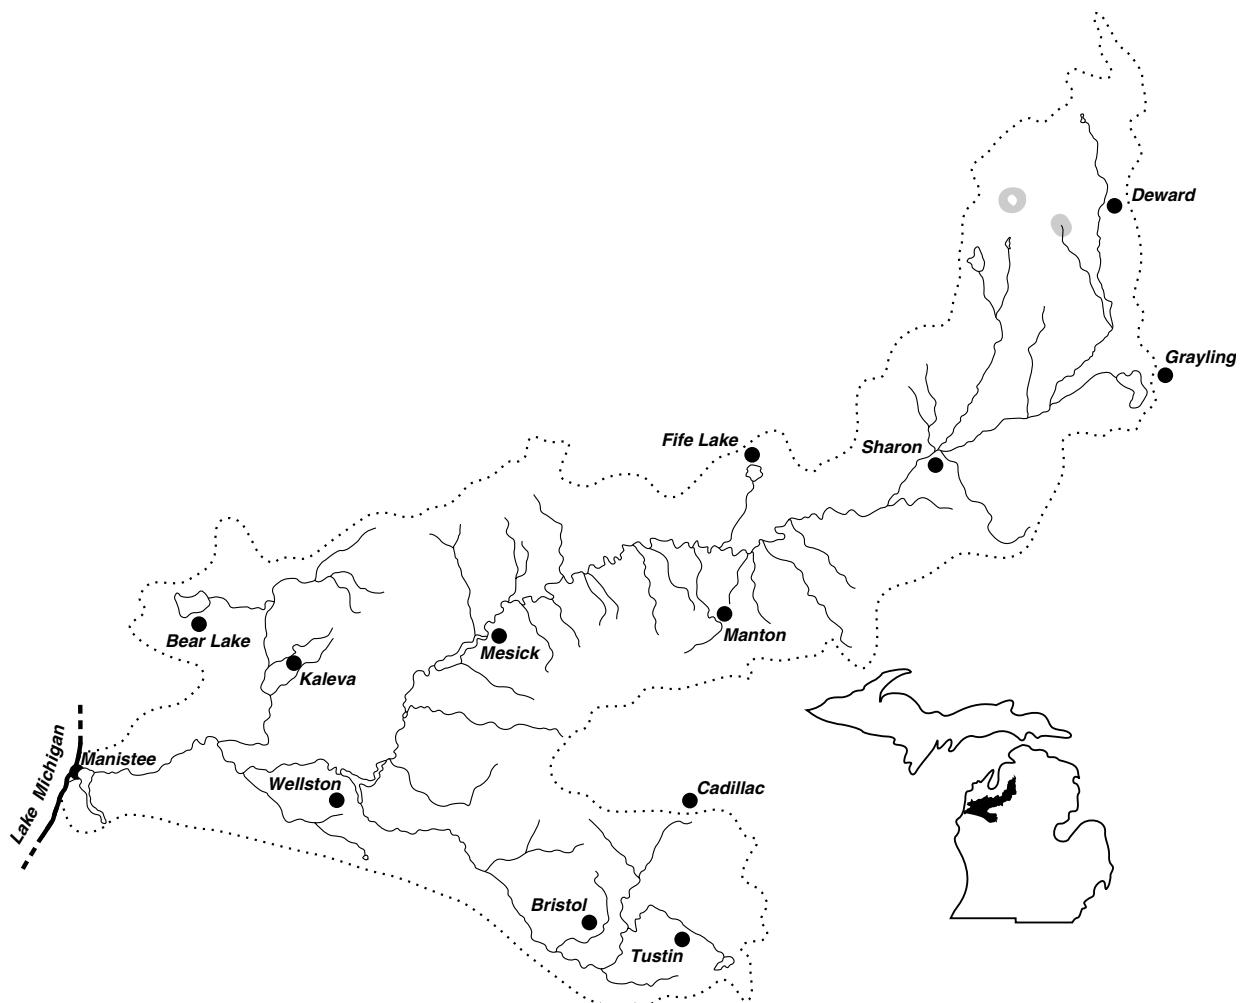

**Splake (*Salvelinus fontinalis* x *Salvelinus namaycush*)**

**Habitat:**

feeding - littoral habitat  
- cool water lakes; also Lake Michigan

spawning - hatchery produced cross of brook and lake trout  
- offspring usually fertile, but with lower fecundity than either parent species

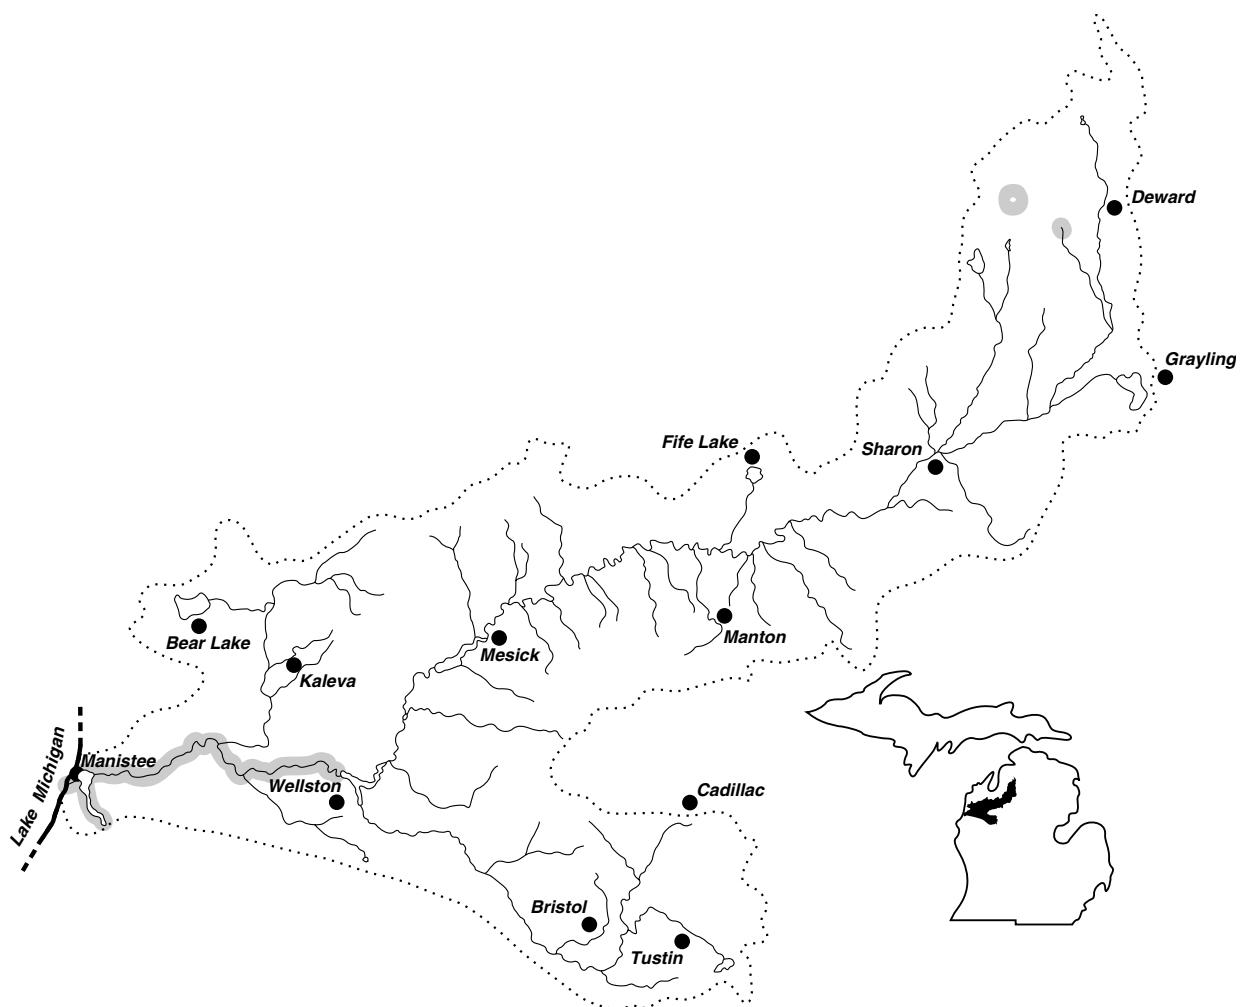

**Lake trout (*Salvelinus namaycush*)**

**Habitat:**

feeding - cold lakes and rivers

spawning - large boulder or rubble substrate  
- shallow water of lakes and rivers

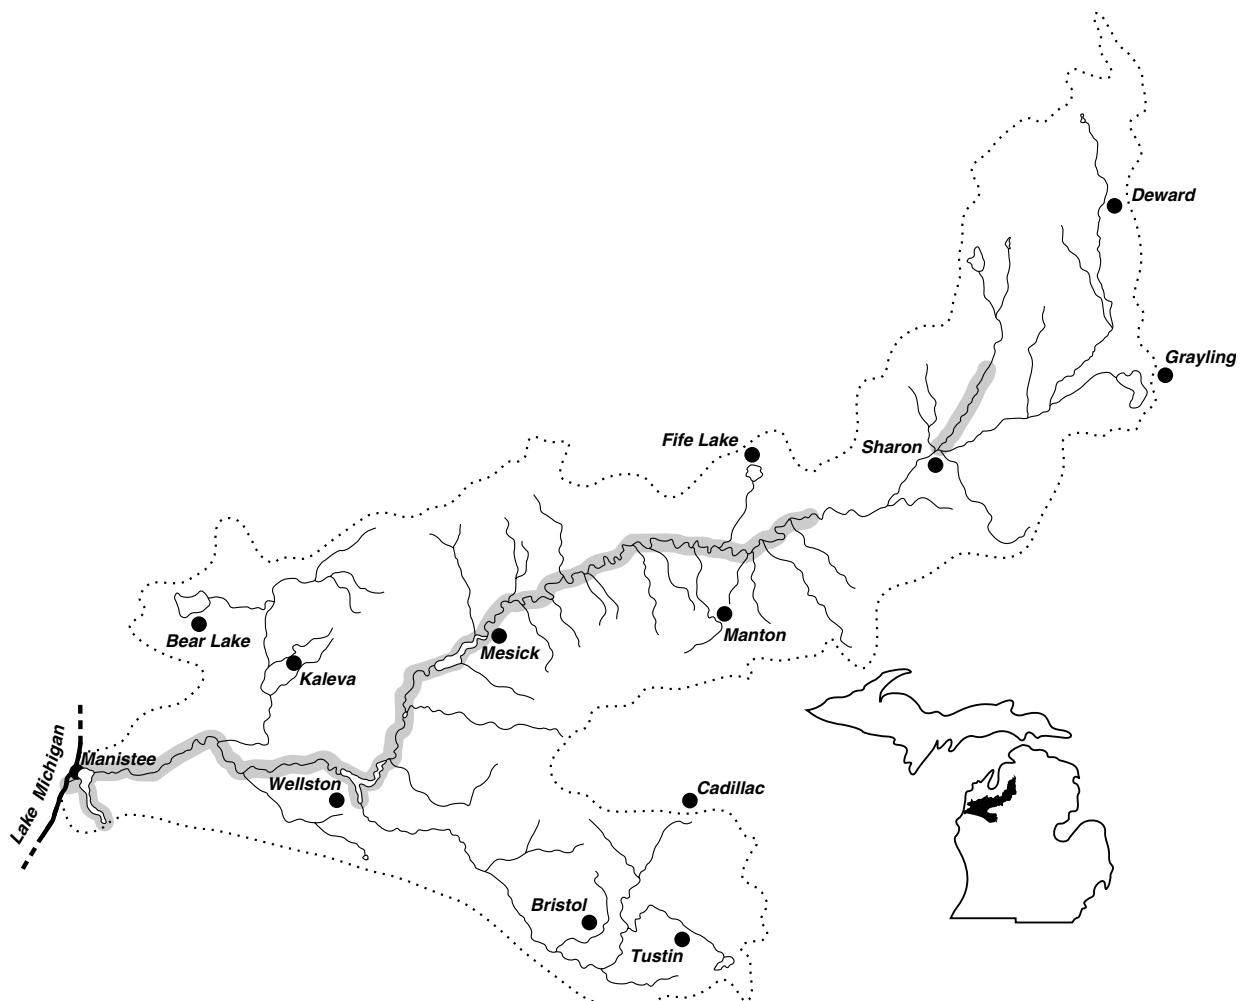

### Trout-perch (*Percopsis omiscomaycus*)

#### Habitat:

feeding - clean sand or fine gravel substrate  
- long deep pools in low gradient streams and Lake Michigan  
- highly intolerant of clayey silts  
- avoids rooted aquatic vegetation

spawning - over rocks in shallows  
- over sand and gravel substrates in Lake Michigan

**Burbot (*Lota lota*)**

**Habitat:**

feeding - deep cold lakes and large cool rivers

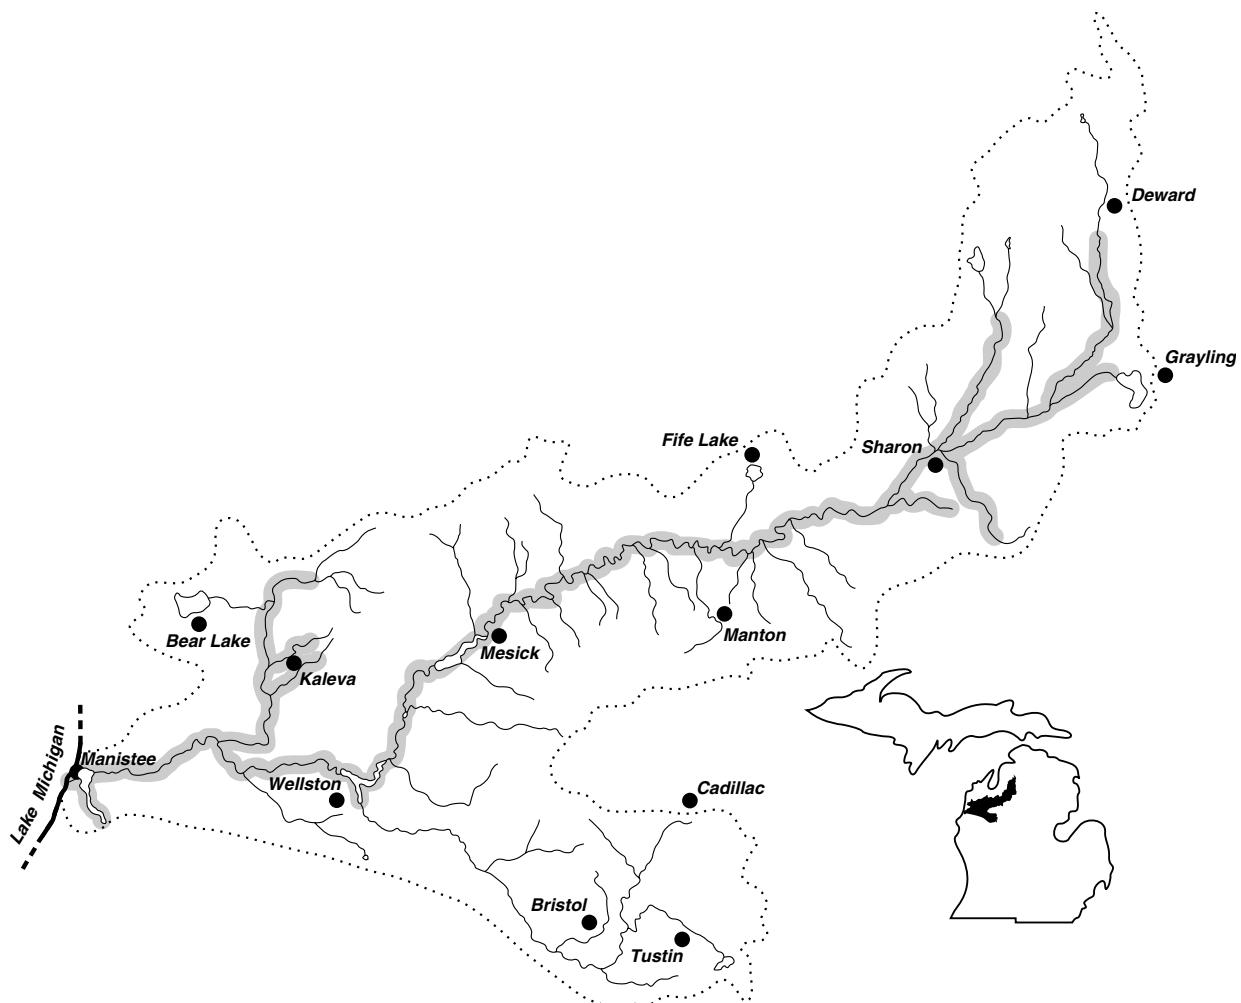

- mud, sand, rubble, boulder, silt, and gravel substrates

spawning - in 1 to 4 feet of water in shallow bays or on shoals 5-10 feet deep

usually in lakes, sometimes rivers

- over sand or gravel substrate

- under ice

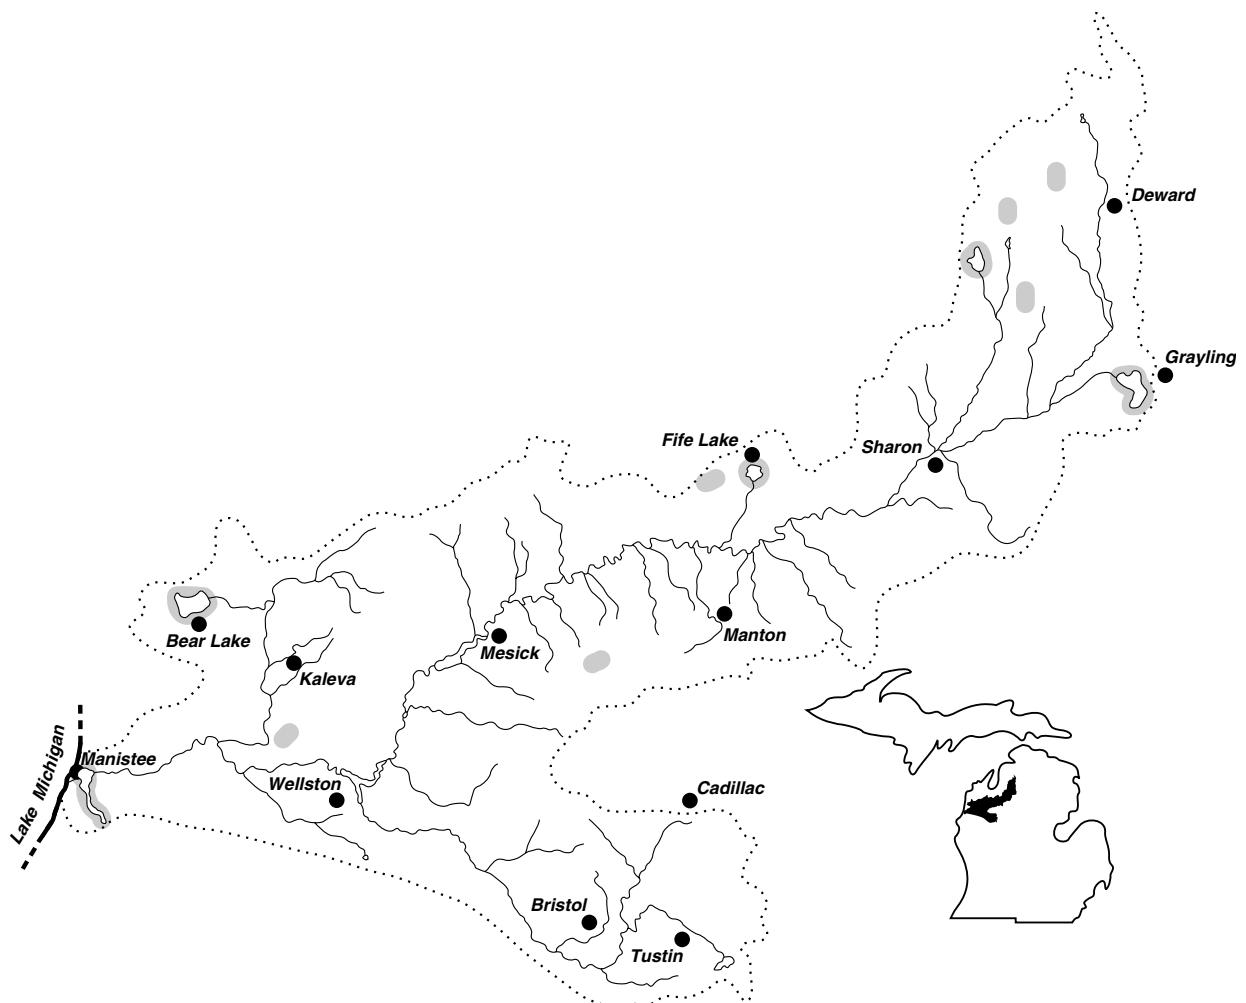

**Banded killifish (*Fundulus diaphanus*)**

**Habitat:**

- feeding - quiet backwaters at the mouths of streams and lakes  
- substrate of sand, gravel, and a few boulders  
- also found over detritus substrate where patches of submerged aquatic vegetation are present

- spawning - quiet areas of weedy pools

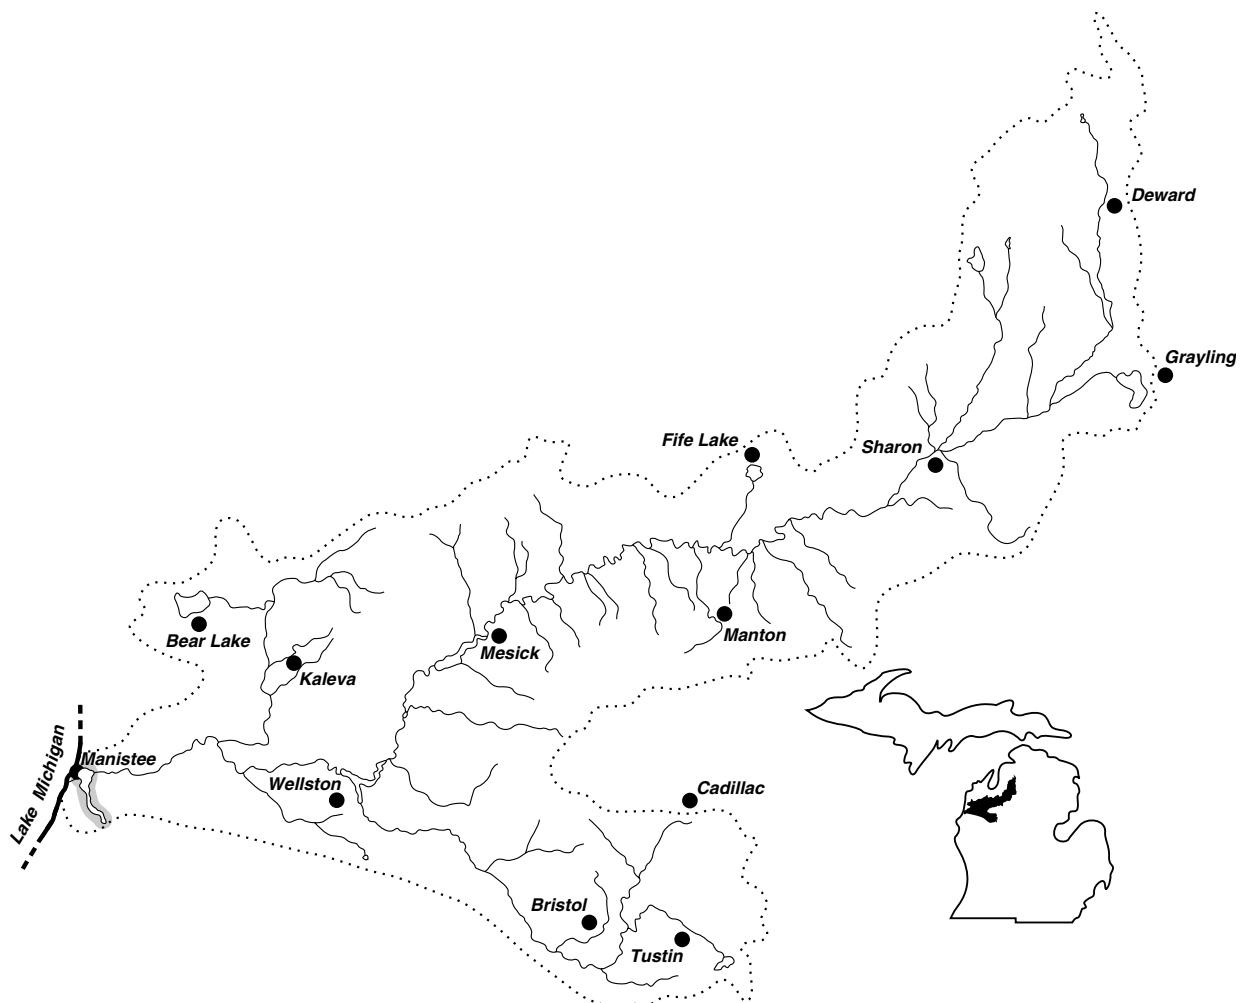

**Brook silverside (*Labidesthes sicculus*)**

**Habitat:**

feeding - clear, warm pools in streams and rivers; also lakes  
- does not tolerate turbidity  
- most frequently at surface

spawning - in and around aquatic vegetation or over gravel substrate with a moderate current

**Brook stickleback (*Cluaea inconstans*)****Habitat:**

feeding - clear, cold, densely vegetated streams, and swampy margins of lakes

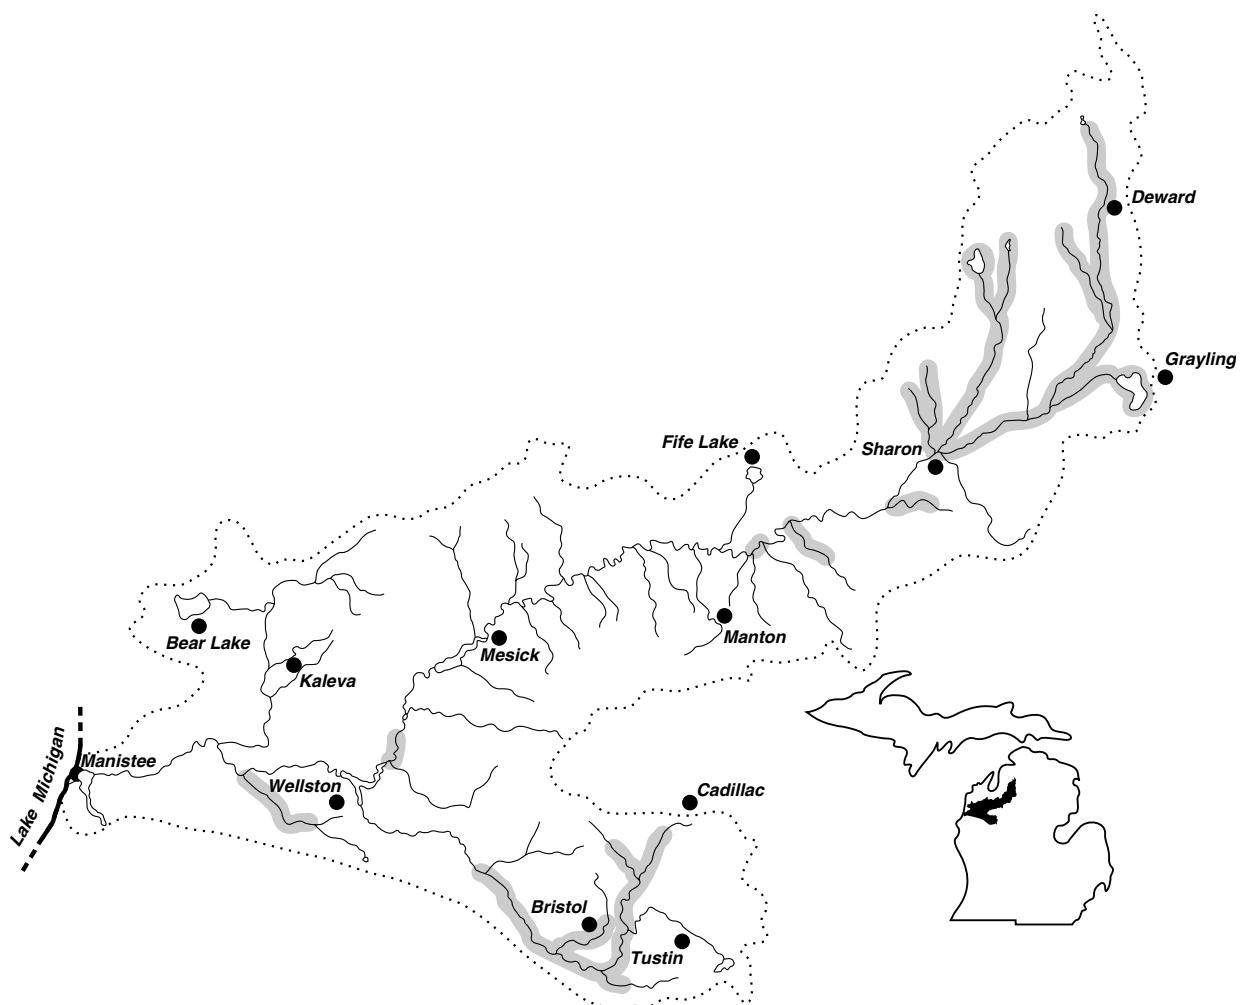

- low gradient

- muck, peat, or marl substrate

- not tolerant of turbidity

spawning - shallow cool (<66°F) water

- aquatic reeds or grasses necessary

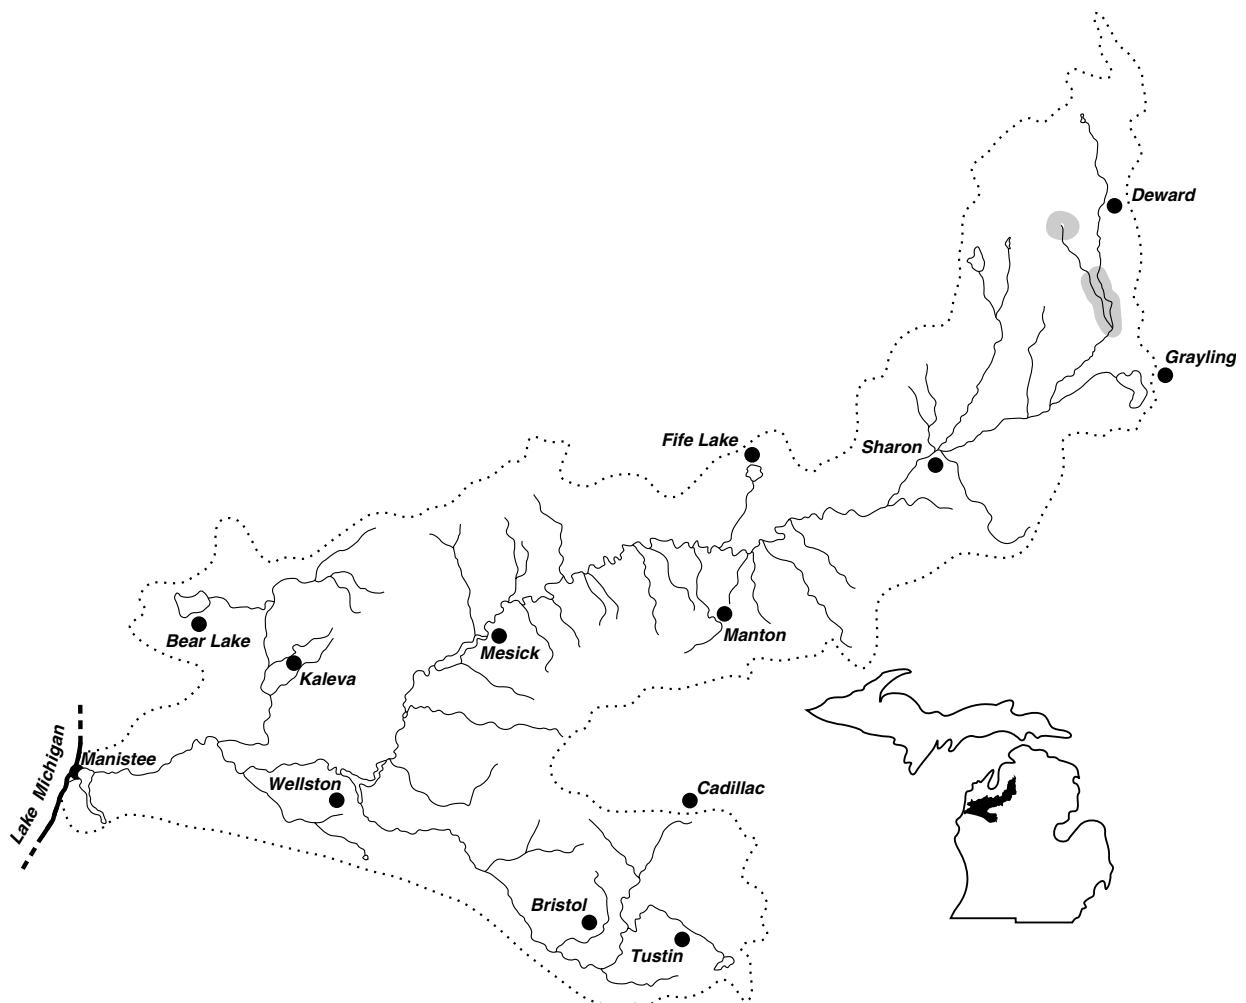

**Ninespine stickleback (*Pungitius pungitius*)**

**Habitat:**

feeding - open water of lakes; also Lake Michigan  
- cool quiet waters

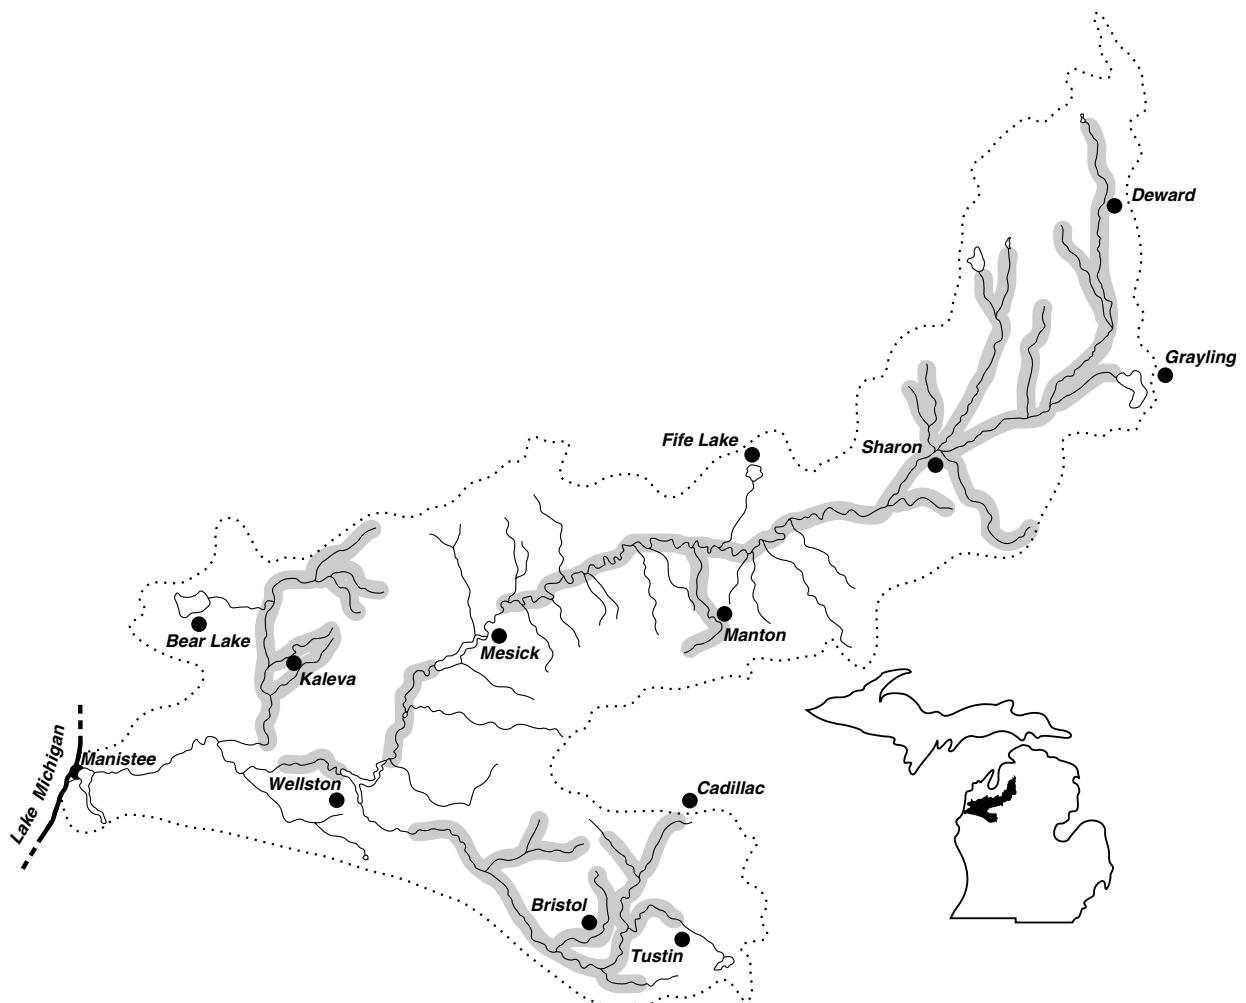

spawning - builds nests among aquatic vegetation in creeks and streams

**Mottled sculpin (*Cottus bairdi*)**

**Habitat:**

- feeding
  - cool to cold streams
  - riffle and rock substrates preferred
  - clear to slightly turbid shallow water
- spawning
  - nests under logs or rock

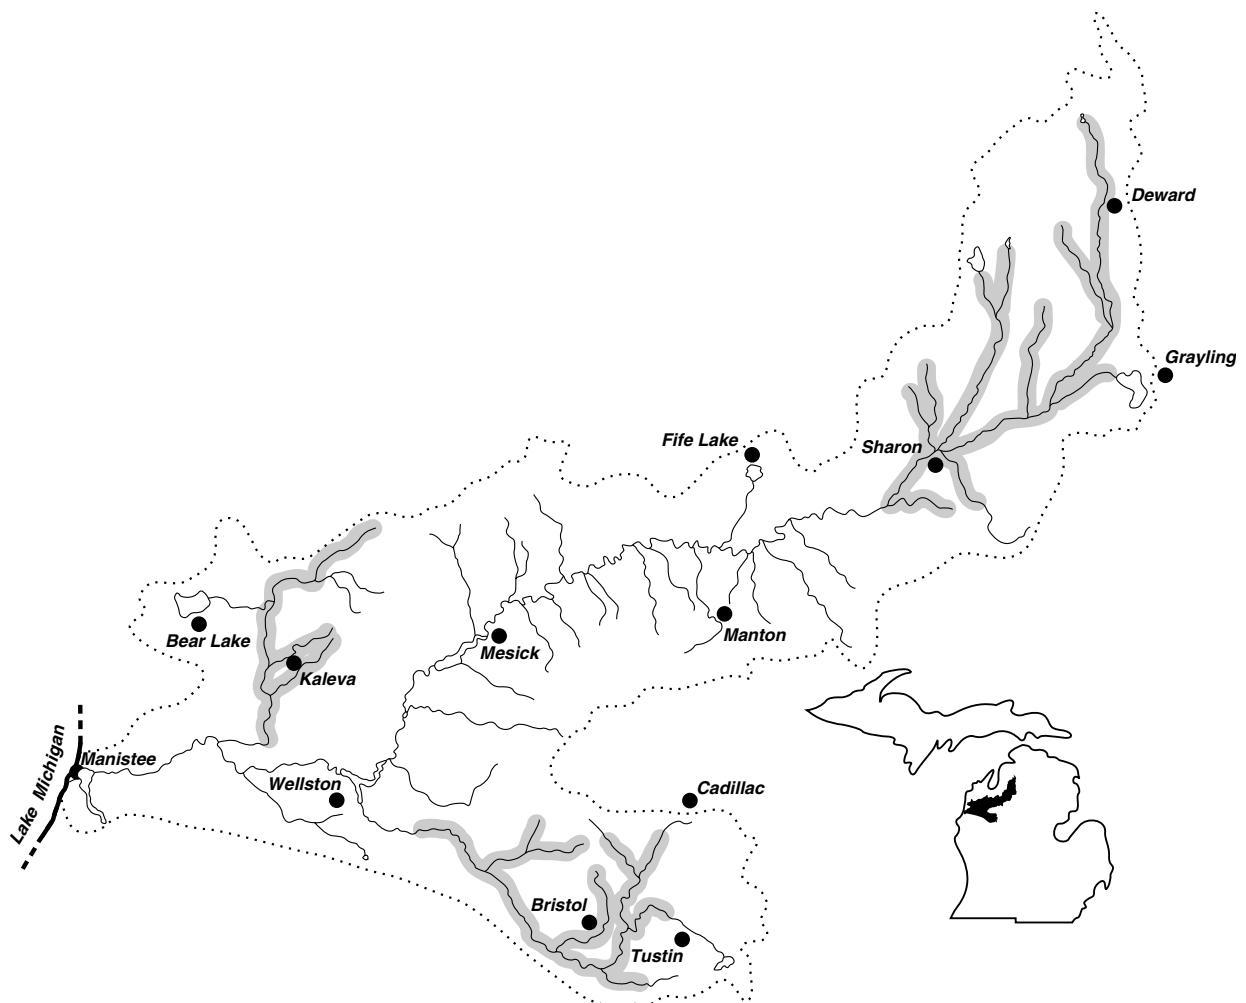

**Slimy sculpin (*Cottus cognatus*)**

**Habitat:**

feeding - cool lakes, impoundments, rivers, and streams  
- gravel or rock substrate

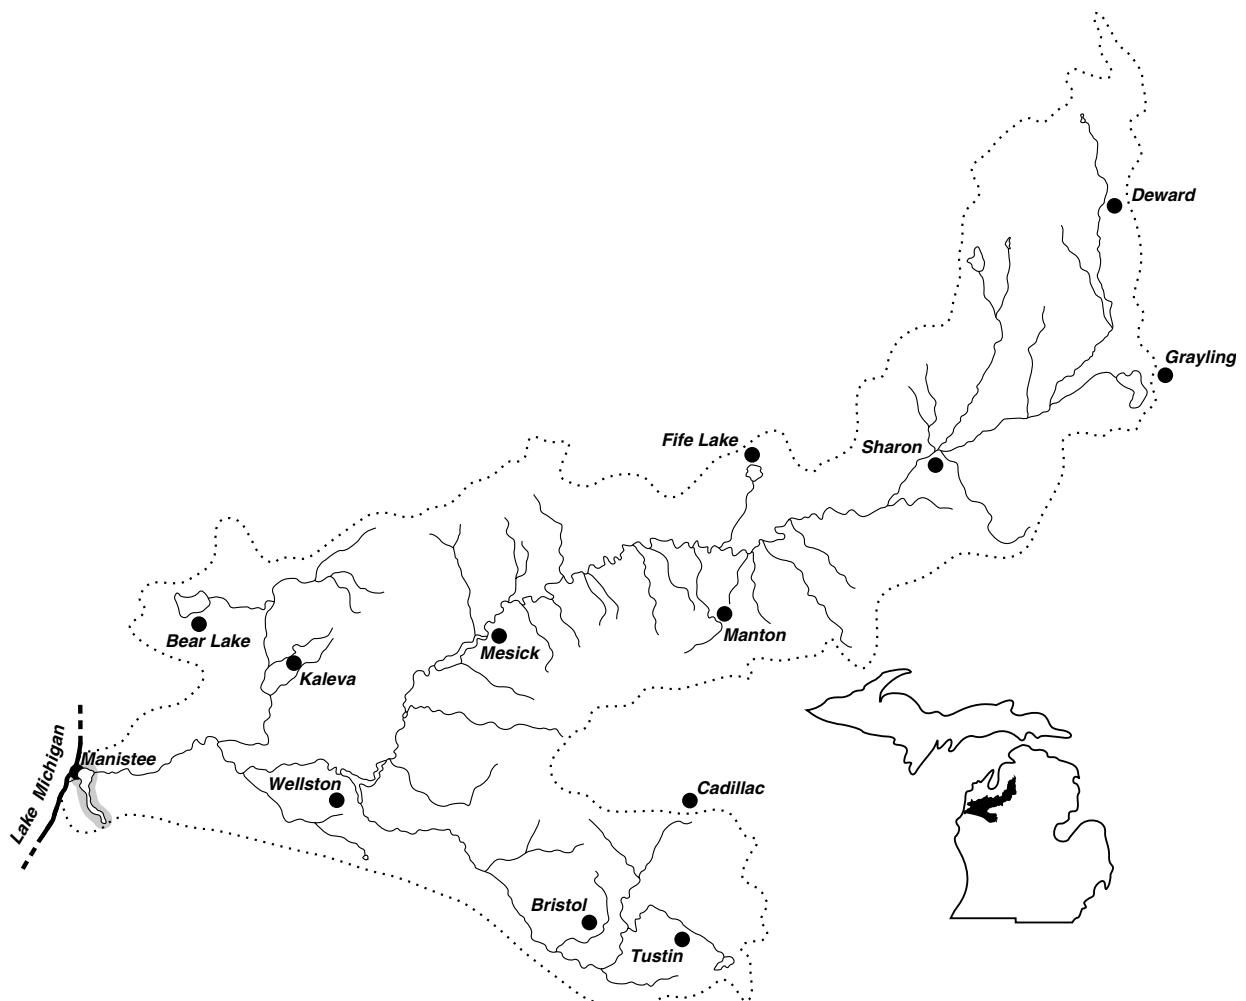

spawning - nest in shallow areas of lakes  
- gravel substrate or rock ledge  
- male parental care

**White bass (*Morone chrysops*)**

**Habitat:**

- feeding
  - large lakes, impoundments, and Lake Michigan
  - clear water of 30 feet or less depth
  - firm substrate
  
- spawning
  - tributary streams or shallow water of lakes
  - over firm substrate

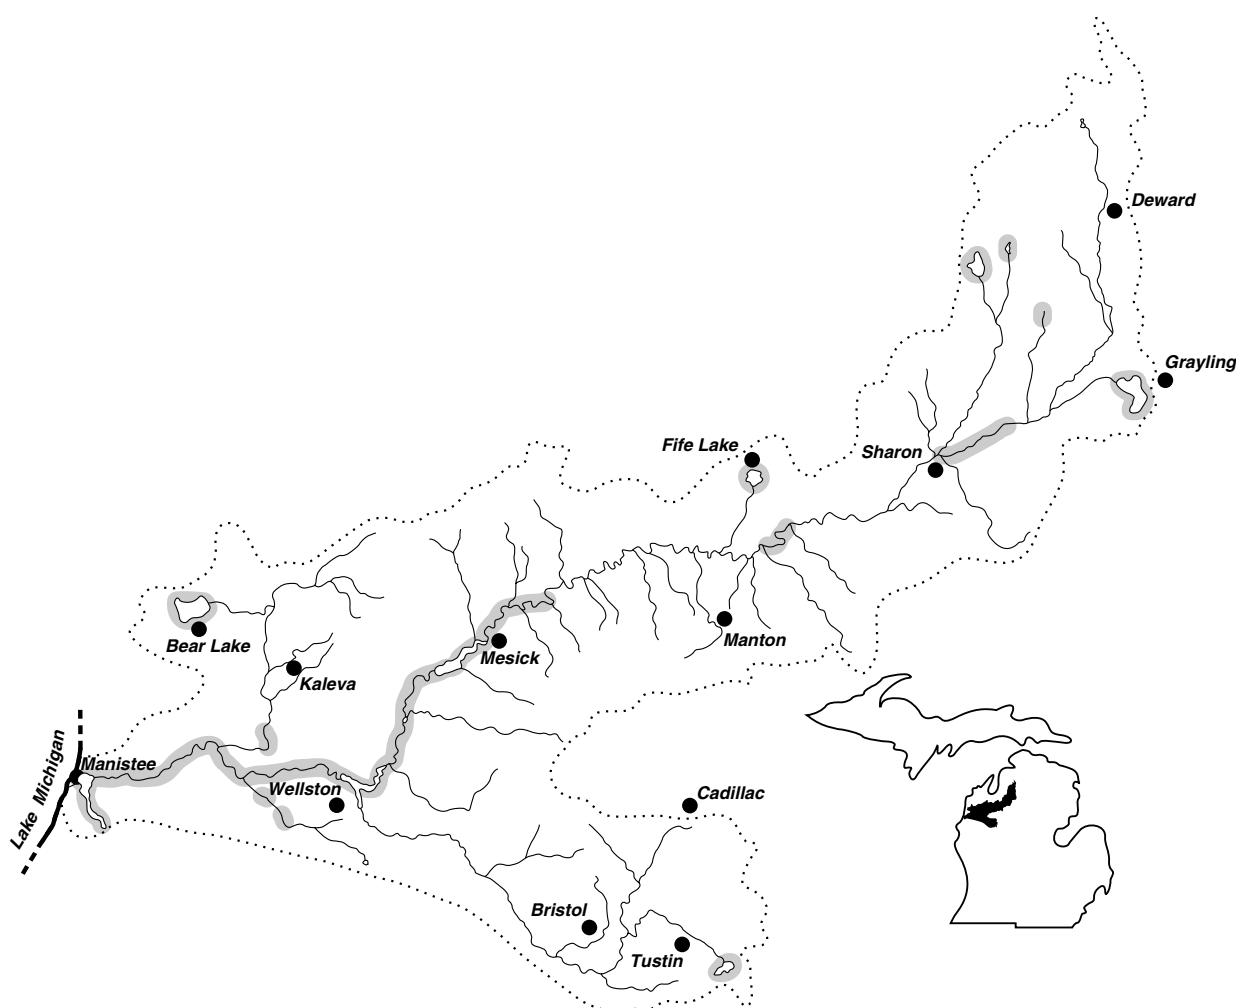

**Rock bass (*Ambloplites rupestris*)**

**Habitat:**

feeding - clear, cool streams, rivers, and lakes  
- rocky to sand substrate  
- woody or vegetative cover

spawning - sand or gravel nests  
- shallow water

winter refuge - deep water

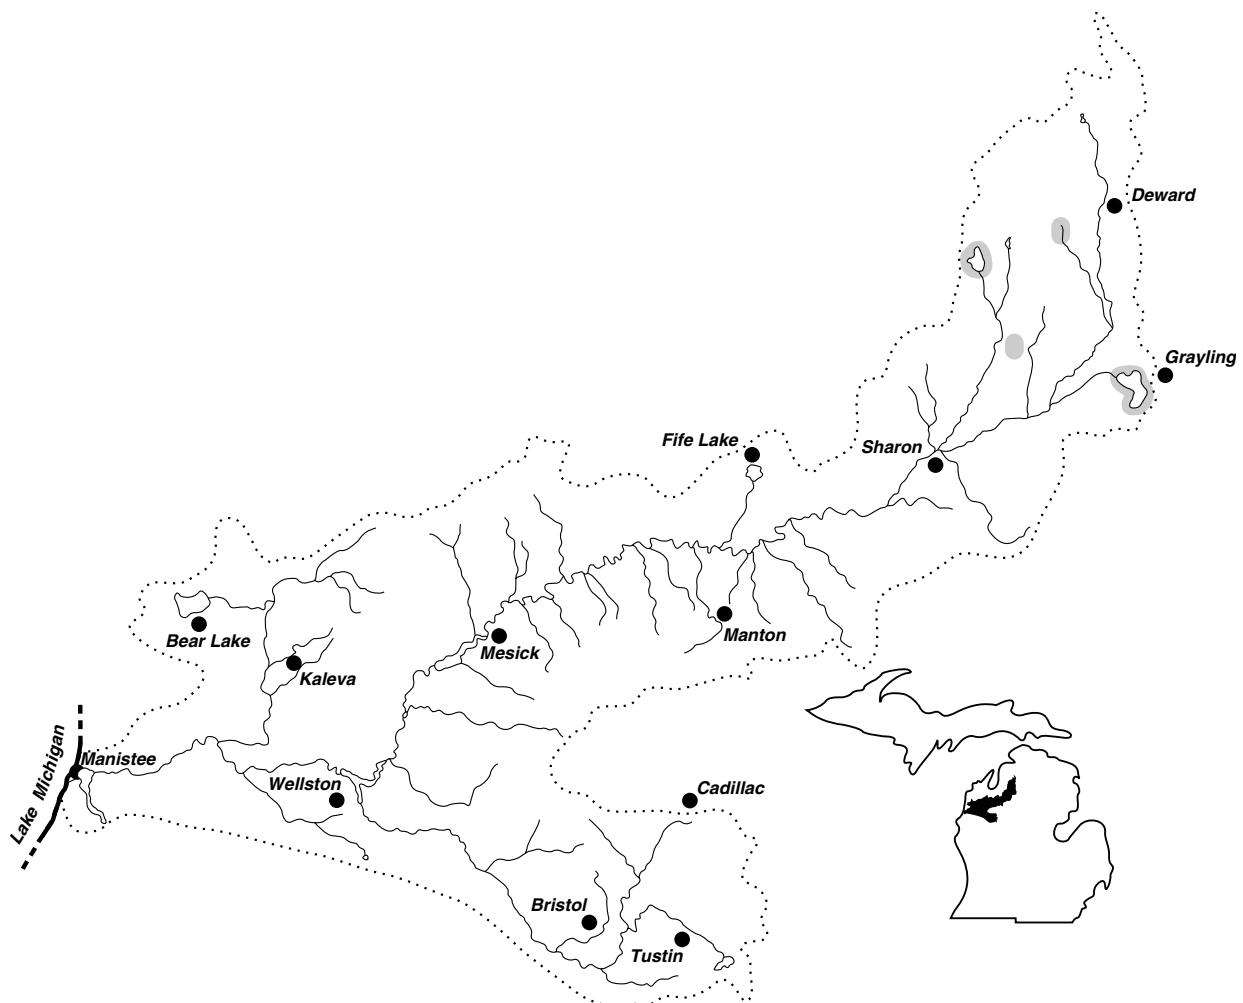

**Green sunfish (*Lepomis cyanellus*)**

**Habitat:**

feeding - impoundments and lakes, and low-current streams and rivers  
- no substrate preference

spawning - nests in shallow areas sheltered by rocks, logs, or aquatic vegetation

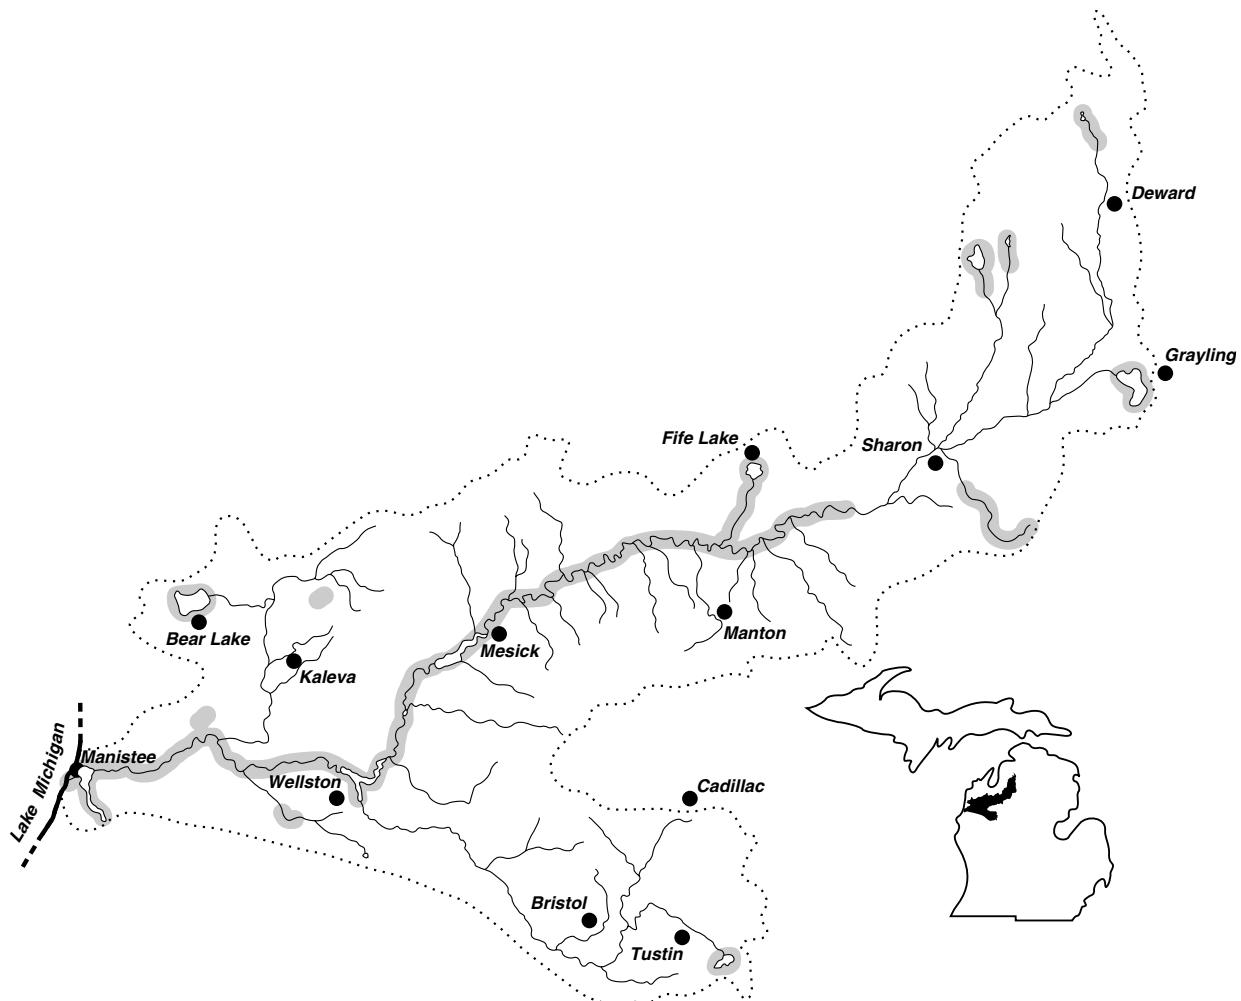

**Pumpkinseed sunfish (*Lepomis gibbosus*)**

**Habitat:**

feeding - non-flowing clear water in streams and rivers; also lakes and impoundments

- muck or sand partly covered with organic debris substrate
- dense beds of submerged aquatic vegetation

spawning - nest in sand, gravel, or rock substrate  
- in shallow water near submerged vegetation

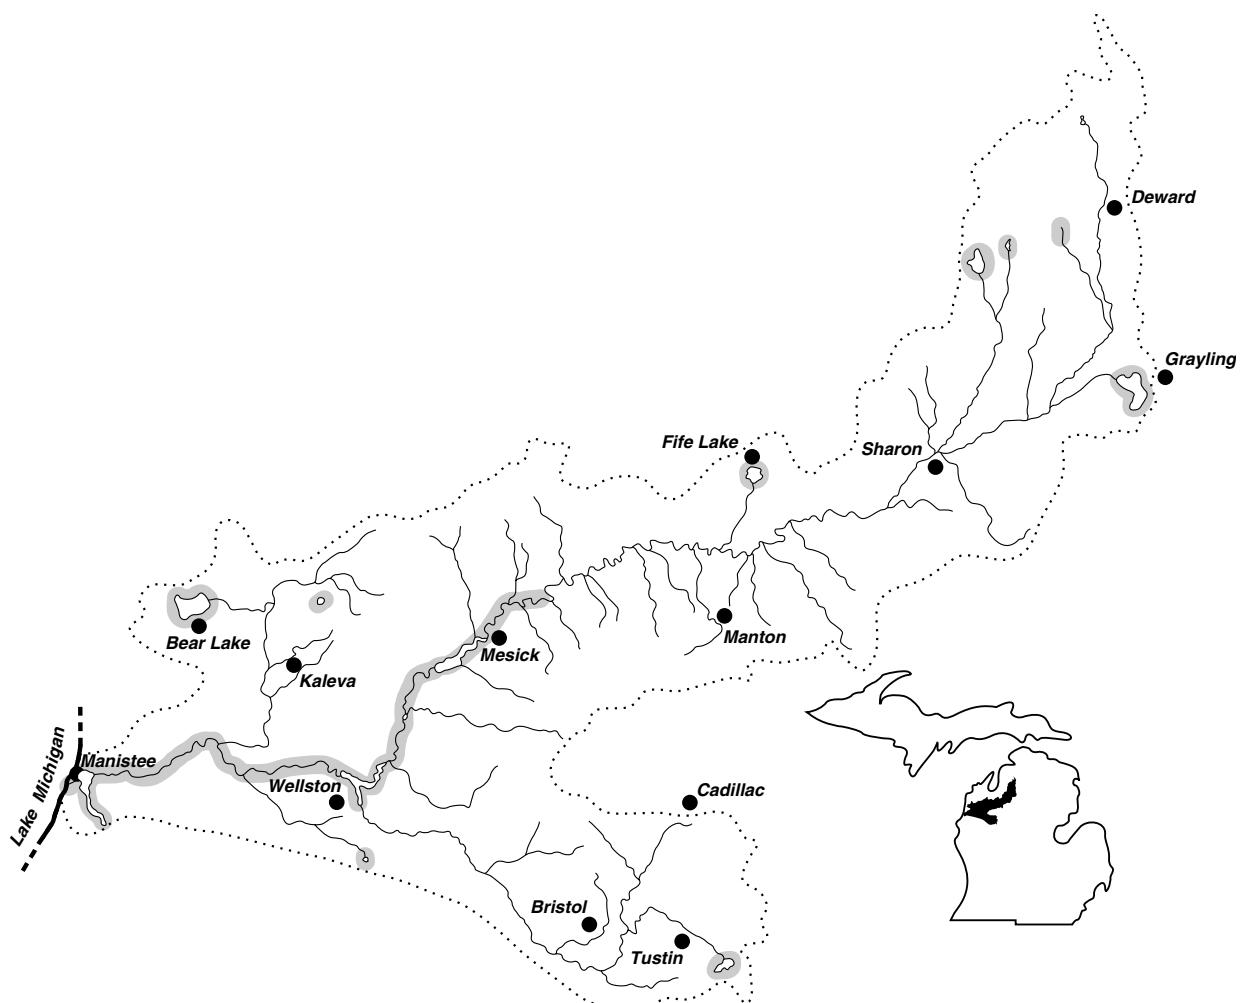

**Bluegill (*Lepomis macochrius*)****Habitat:**

feeding - non-flowing clear streams and rivers; also lakes and impoundments  
- sand, gravel, or muck containing organic debris substrate  
- scattered beds of aquatic vegetation  
- cannot tolerate low oxygen or continuous high turbidity and siltation

spawning - nests in firm substrate of gravel, sand, or mud

winter refuge - deep water

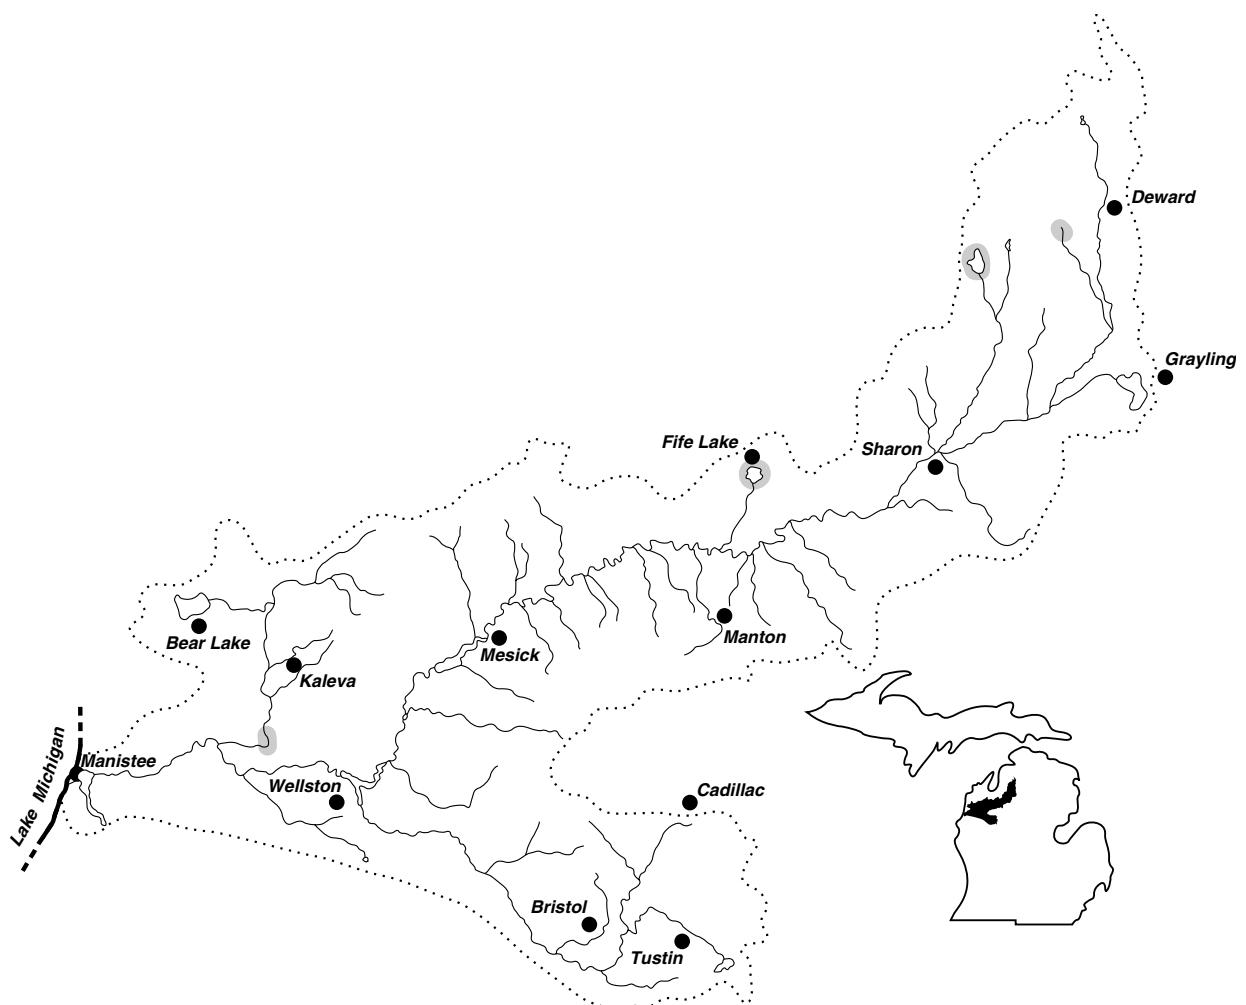

**Longear sunfish (*Lepomis megalotis*)**

**Habitat:**

feeding - clear moderate-sized shallow streams with moderate vegetation  
- rocky substrates  
- little to no current

spawning - nests in gravel, sand, or hard rock substrate

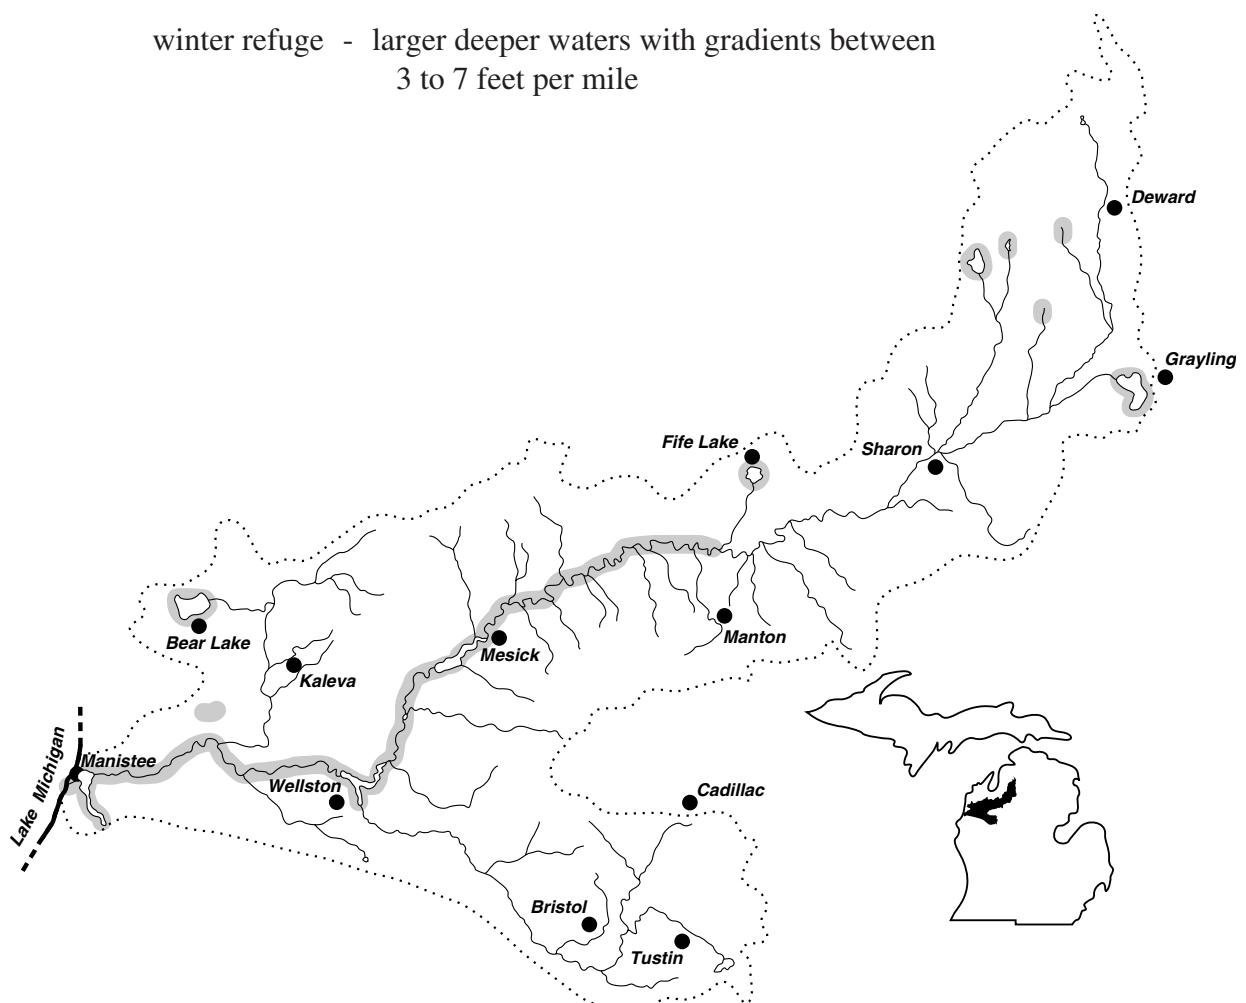

## Smallmouth bass (*Micropterus dolomieu*)

### Habitat:

feeding - clear, cool, deep lakes and rivers  
 - streams where 40% consists of riffles over clean gravel, boulder, or bedrock substrate  
 - in pools with a current and >4 feet of depth  
 - gradients between 4 and 25 feet per mile

spawning - nest in sandy, gravel, or rocky substrate  
 - gradients 7 to 25 feet per mile  
 - streams 20 to 100 feet wide

winter refuge - larger deeper waters with gradients between 3 to 7 feet per mile

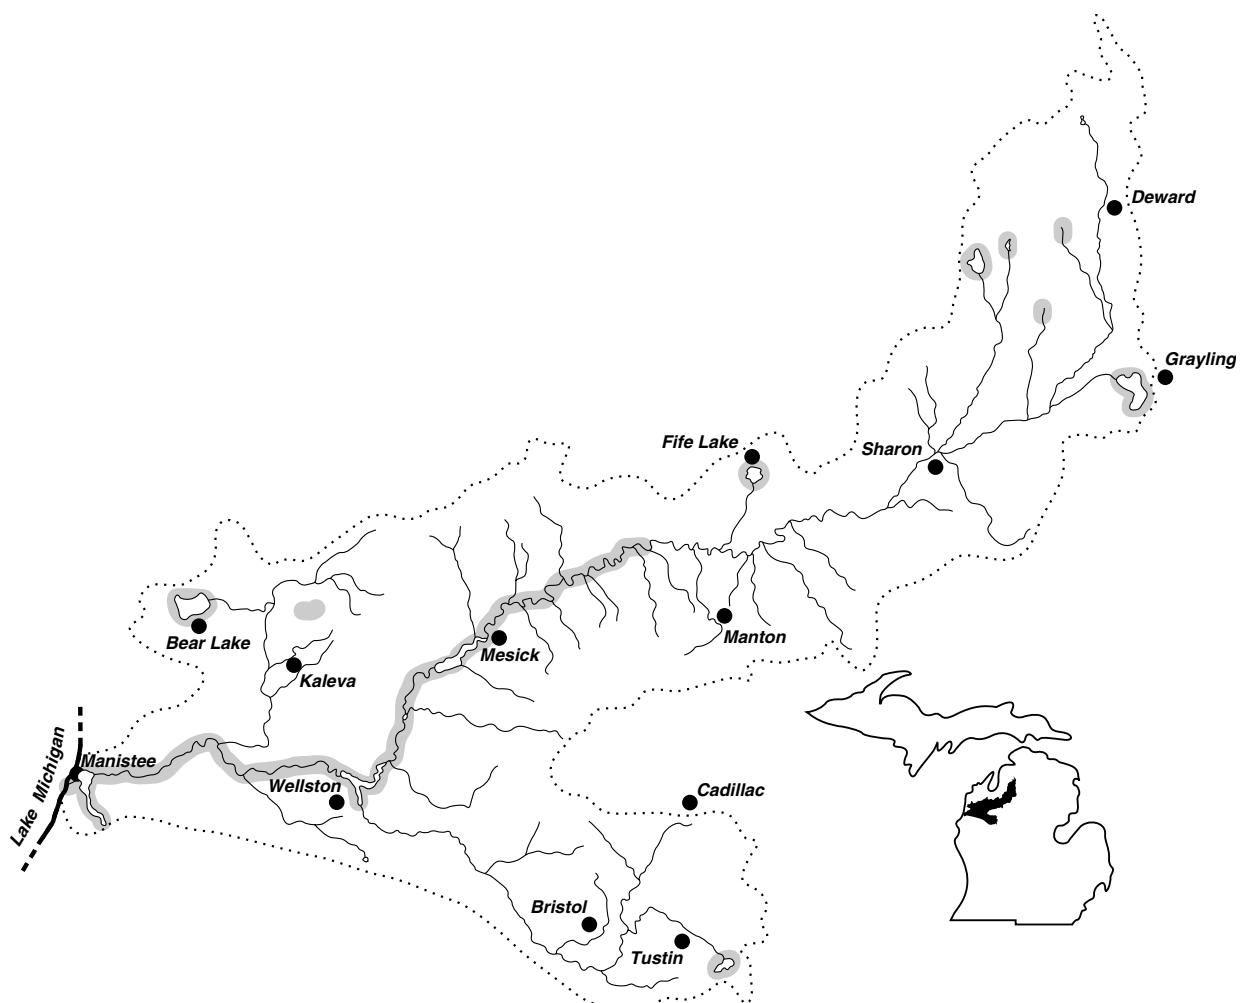

### Largemouth bass (*Micropterus salmoides*)

#### Habitat:

feeding - non-flowing clear waters - lakes, impoundments, and pools of streams  
 - abundant aquatic vegetation  
 - soft muck, organic debris, gravel, sand, and hard non-flocculent clay substrates

spawning - nest in gravelly sand to marl and soft mud substrates  
 - emergent vegetation  
 - quiet shallow bays; no current

**Black crappie (*Pomoxis nigromaculatus*)****Habitat:**

feeding - larger clear non-silty low-gradient rivers; also in lakes and impoundments

- clean hard sand or muck substrate

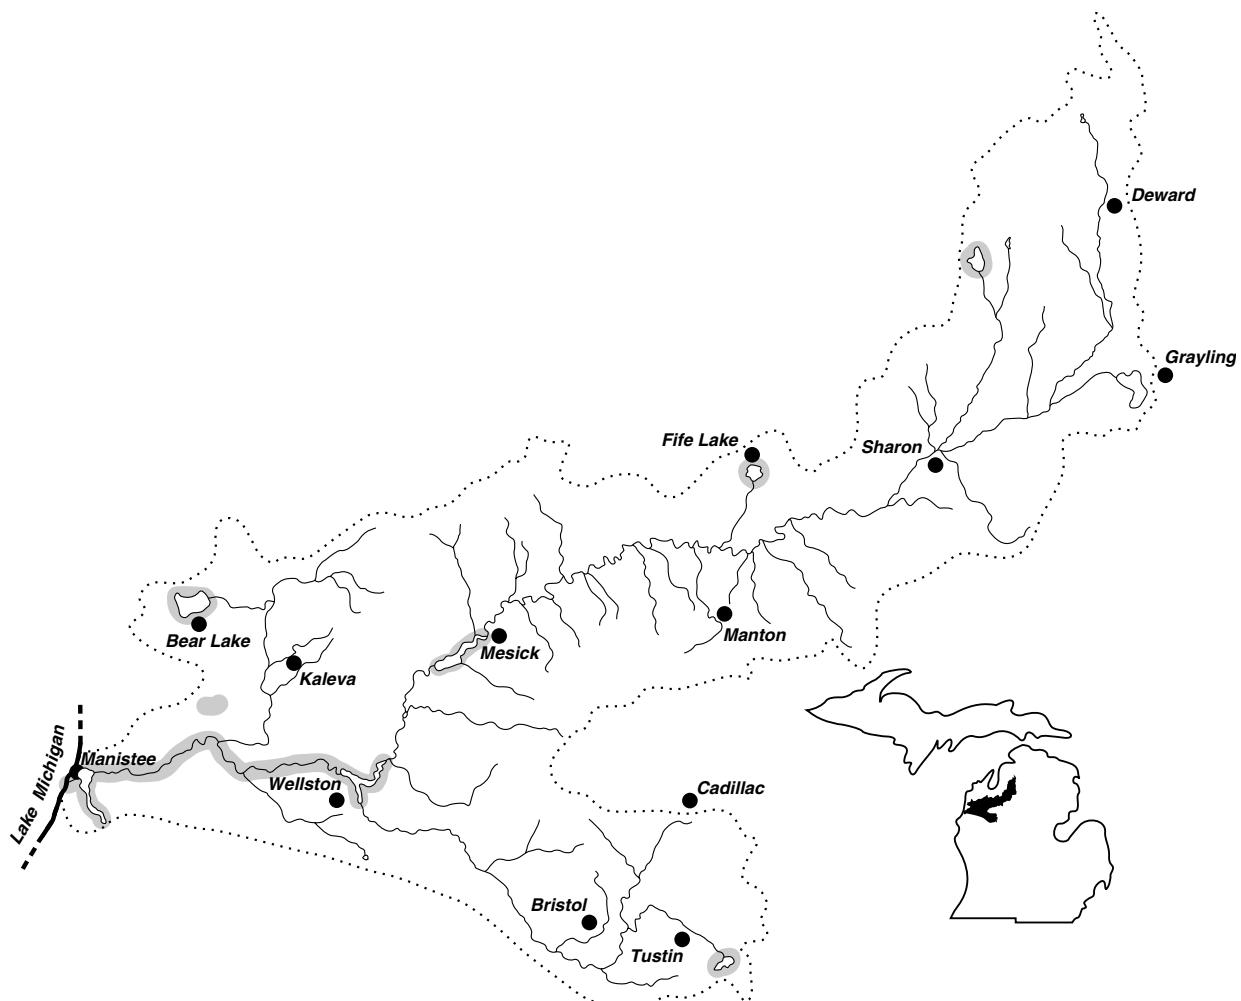

- associated with submerged aquatic vegetation

- does not tolerate silt or turbidity well

spawning - nests in gravel, sand, or mud substrate

- some vegetation must be present

- sometimes nests under banks

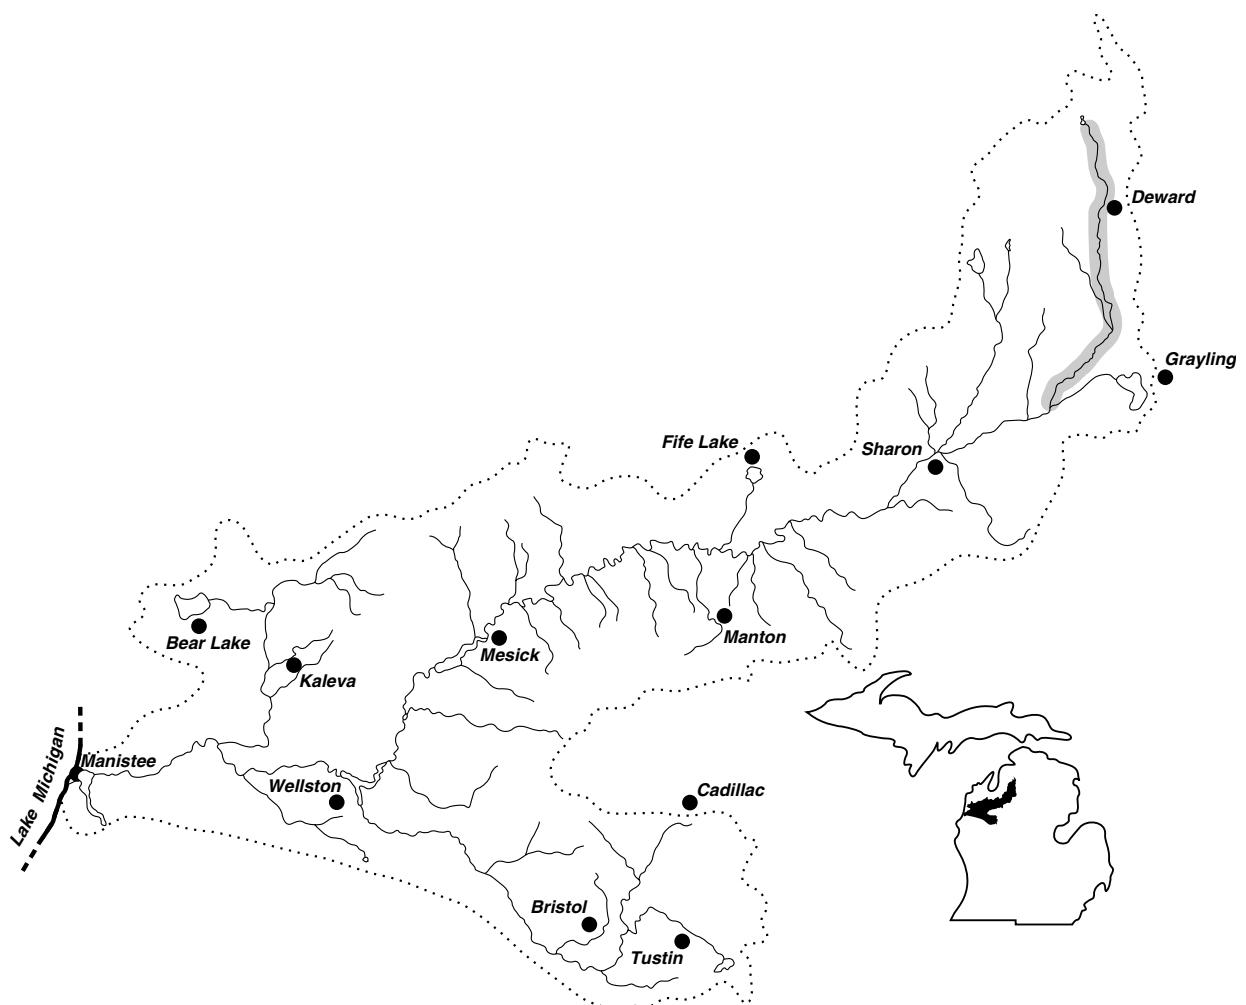

**Rainbow darter (*Etheostoma caeruleum*)**

**Habitat:**

- feeding
  - gravelly high gradient riffles
  - clear, moderate to large streams
  - in shallows (average 1 foot)

spawning - gravel or rubble riffles

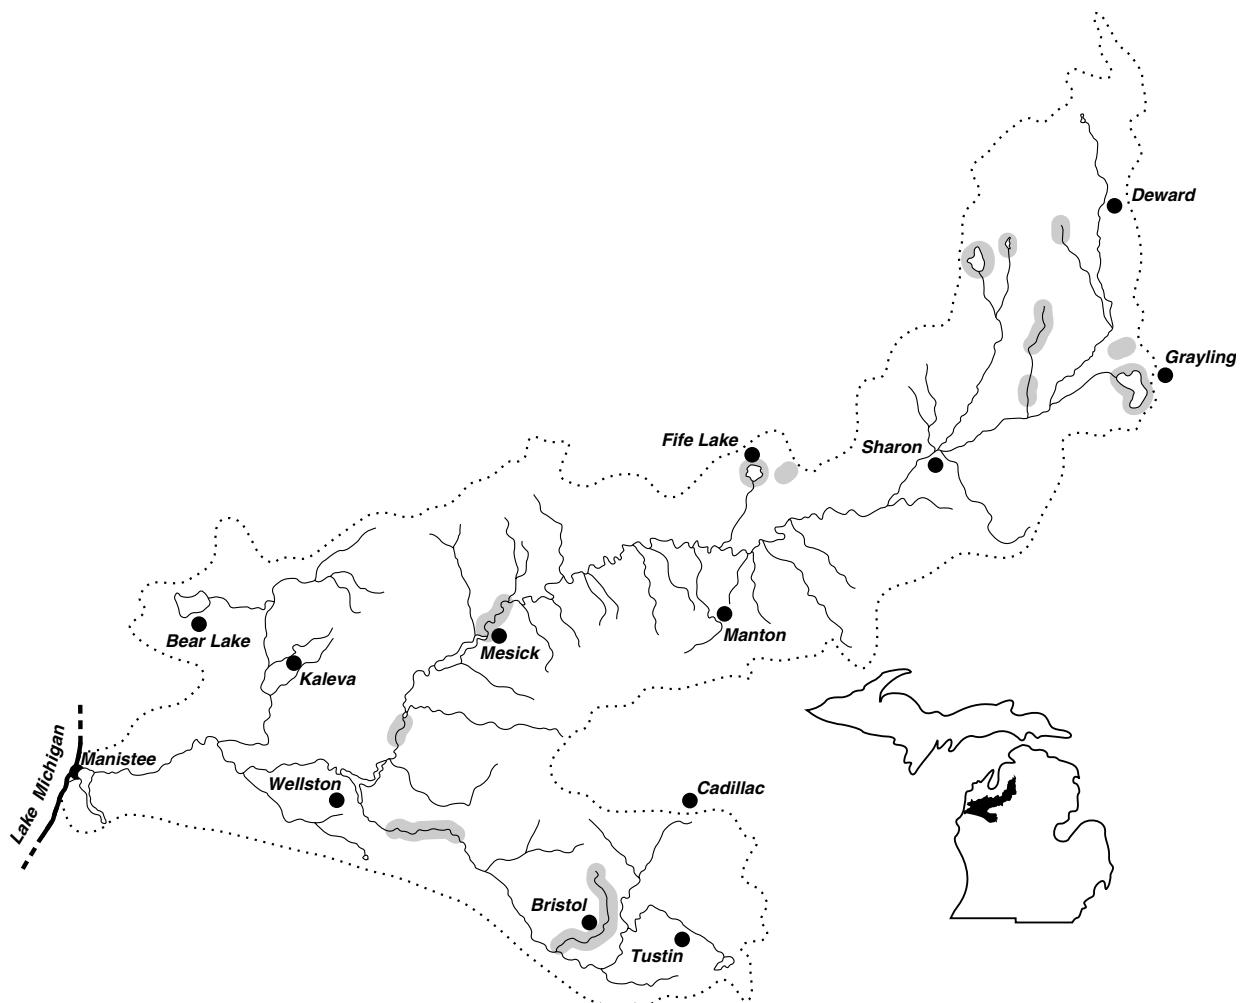

**Iowa darter (*Etheostoma exile*)**

**Habitat:**

feeding - clear, slow moving streams and lakes  
- sandy to muddy substrates  
- intolerant of turbid water  
- lives in rooted aquatic vegetation

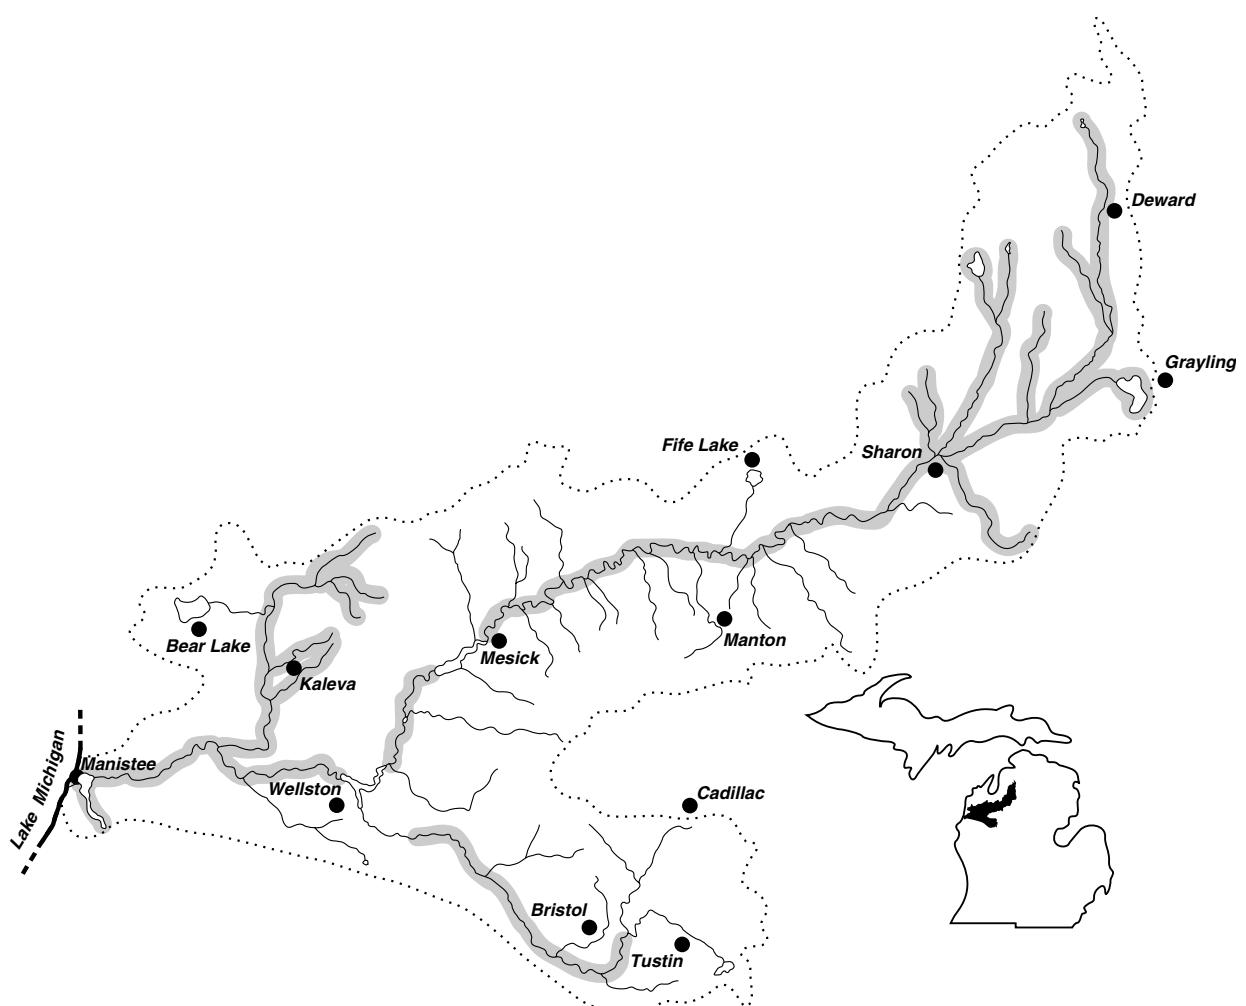

spawning - in pond-like extensions of streams on organic matter or roots  
- in shallows

**Johnny darter (*Etheostoma nigrum*)****Habitat:**

feeding - sand and silt substrate  
- little to moderate current  
- shallow areas of streams, rivers, lakes, and impoundments  
- tolerant of many organic and inorganic pollutants and turbidity

spawning - underneath rocks  
- in stream pools or protected shallows of lakes

**Yellow perch (*Perca flavescens*)****Habitat:**

feeding - clear lakes and impoundments; also Lake Michigan

- low gradient rivers

- abundance of rooted aquatics

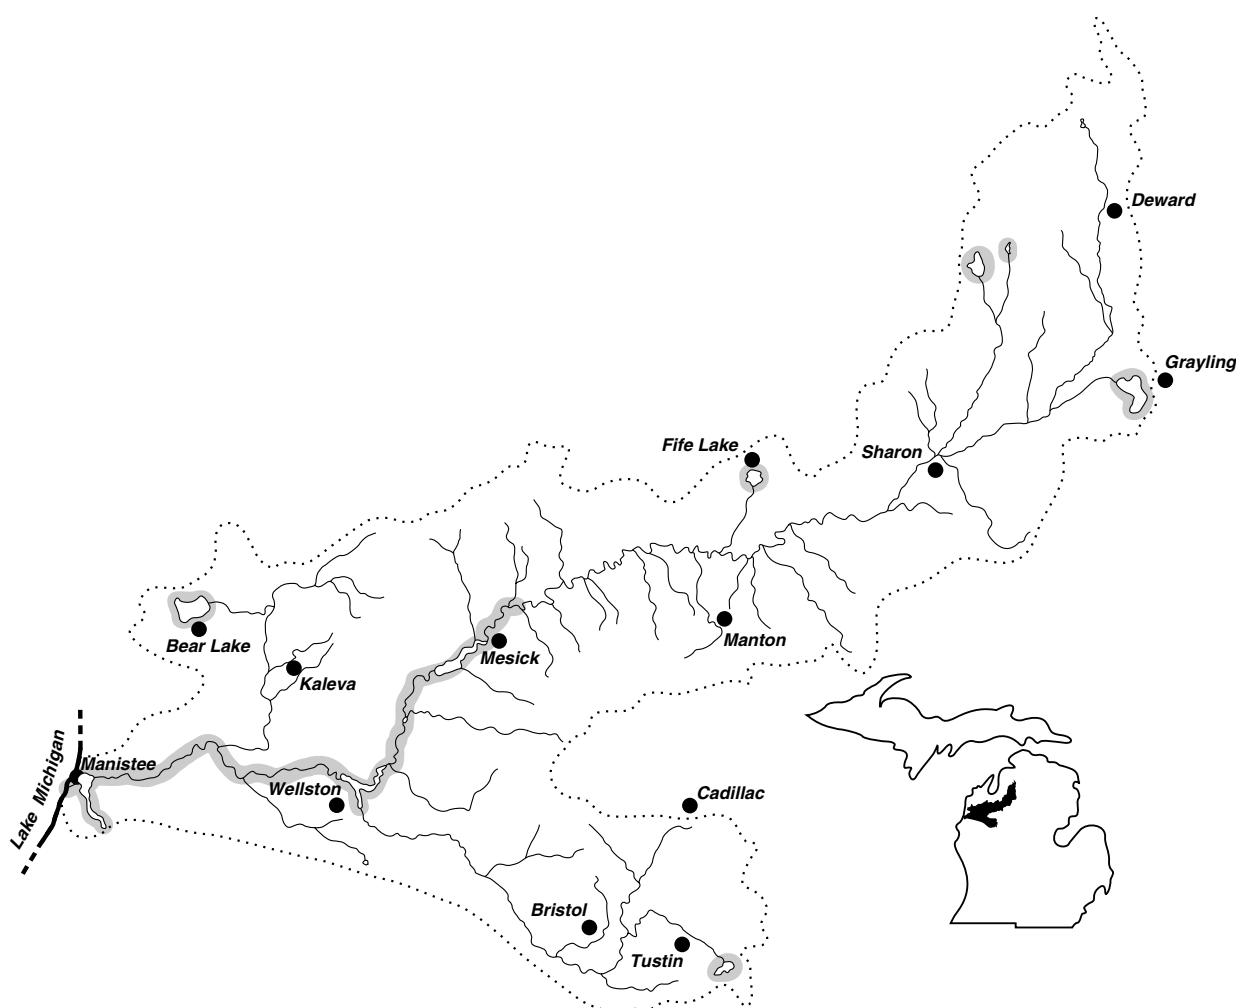

- muck, organic debris, sand, or gravel substrate

- does not tolerate turbidity and siltation

spawning - shallows of lakes, tributaries of streams

- occurs over rooted vegetation, submerged brush, fallen trees

- may occur over sand or gravel

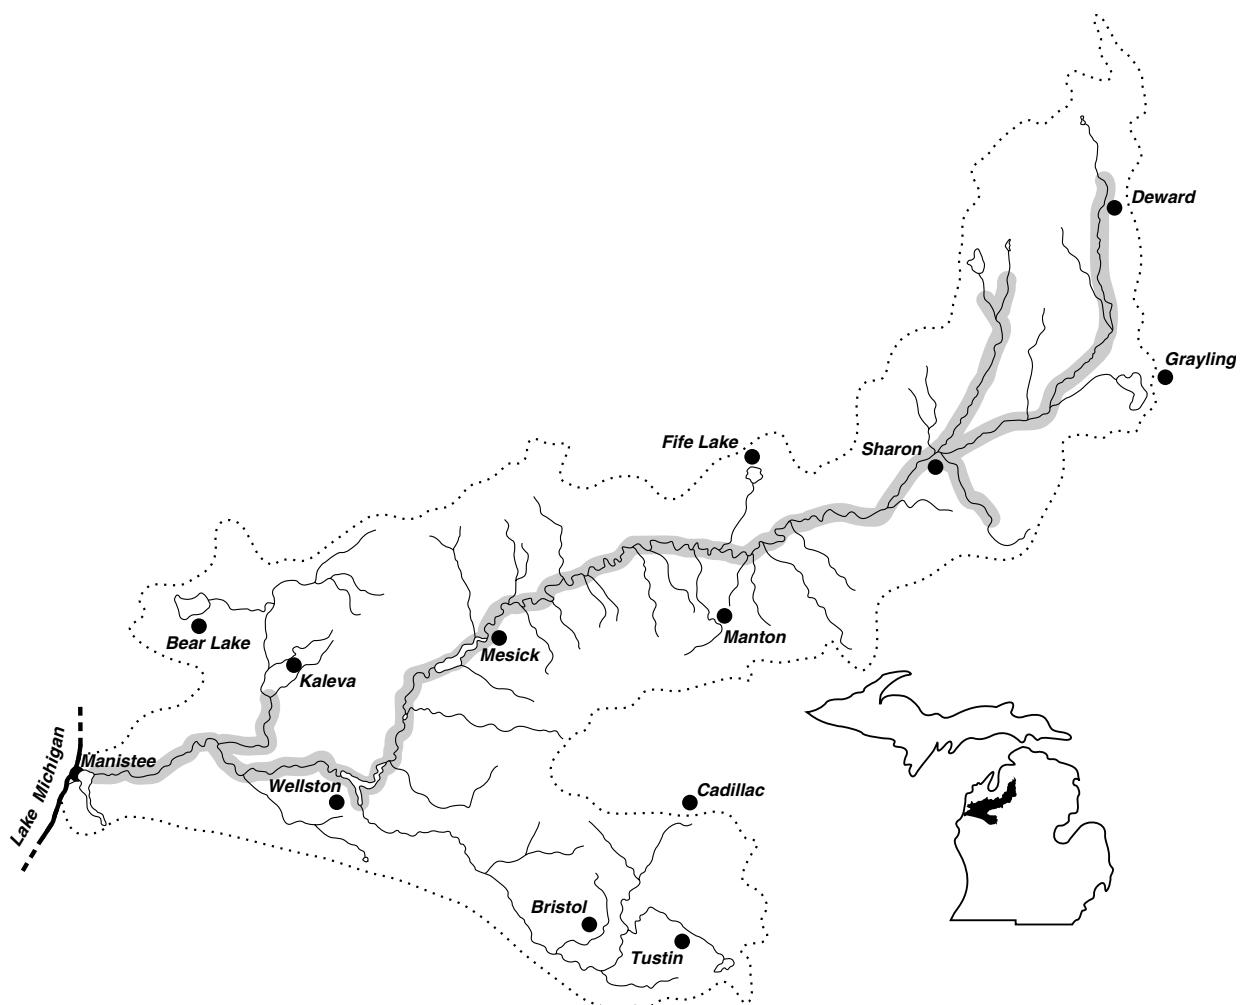

### Logperch (*Percina caprodes*)

#### Habitat:

- feeding - gravel riffles, deeper slower sections of rivers  
- medium size streams; also lakes, impoundments, and Lake Michigan  
- sand, gravel, or rock substrate  
- avoids turbidity and silt

spawning - riffles or sandy in-shore shallows

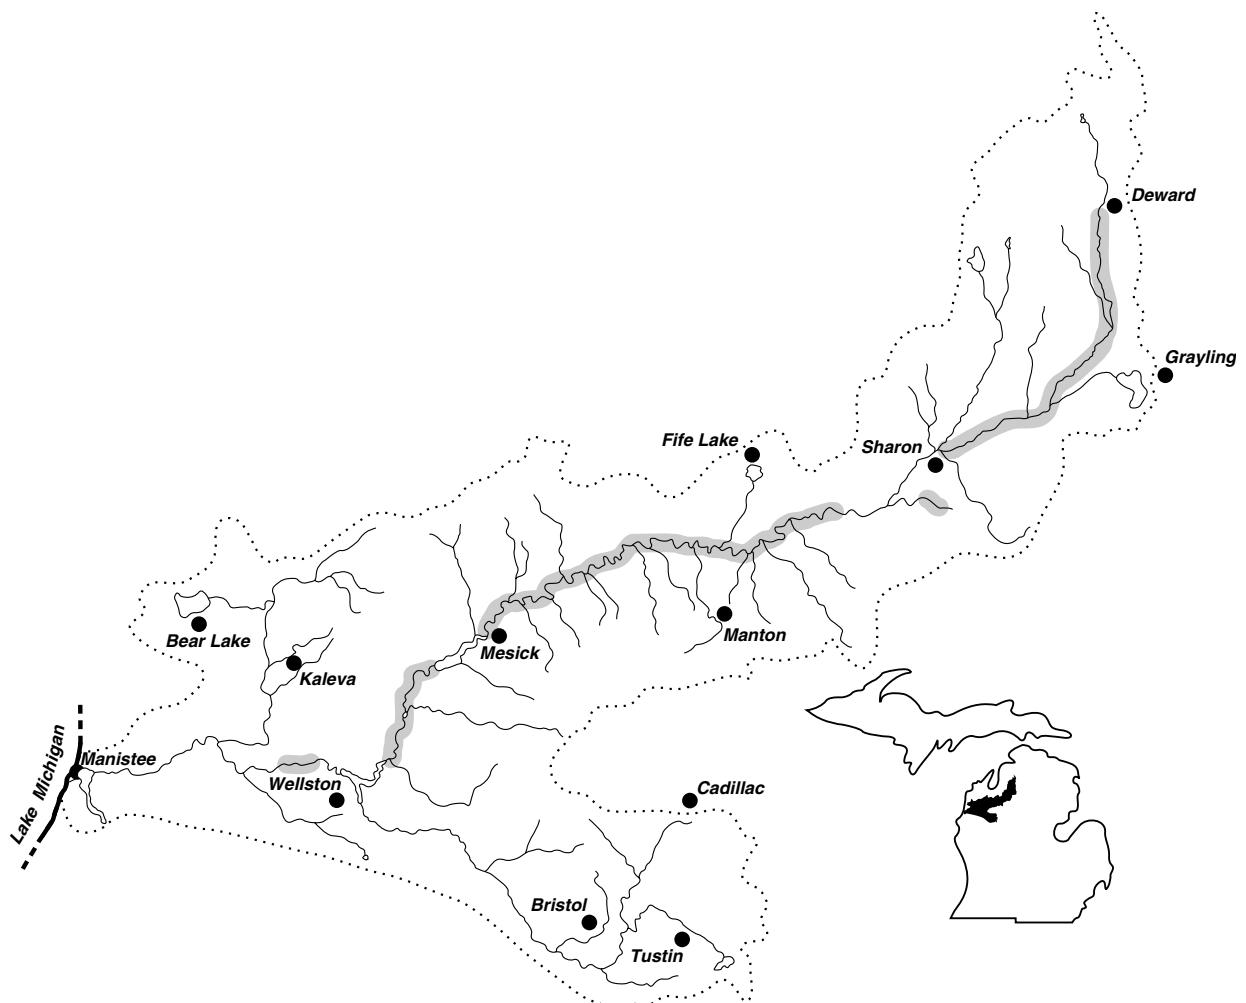

**Blackside darter (*Percina maculata*)**

**Habitat:**

- feeding
  - small to medium streams
  - low to medium gradient
  - gravel and sand substrate
  - tolerate some turbidity

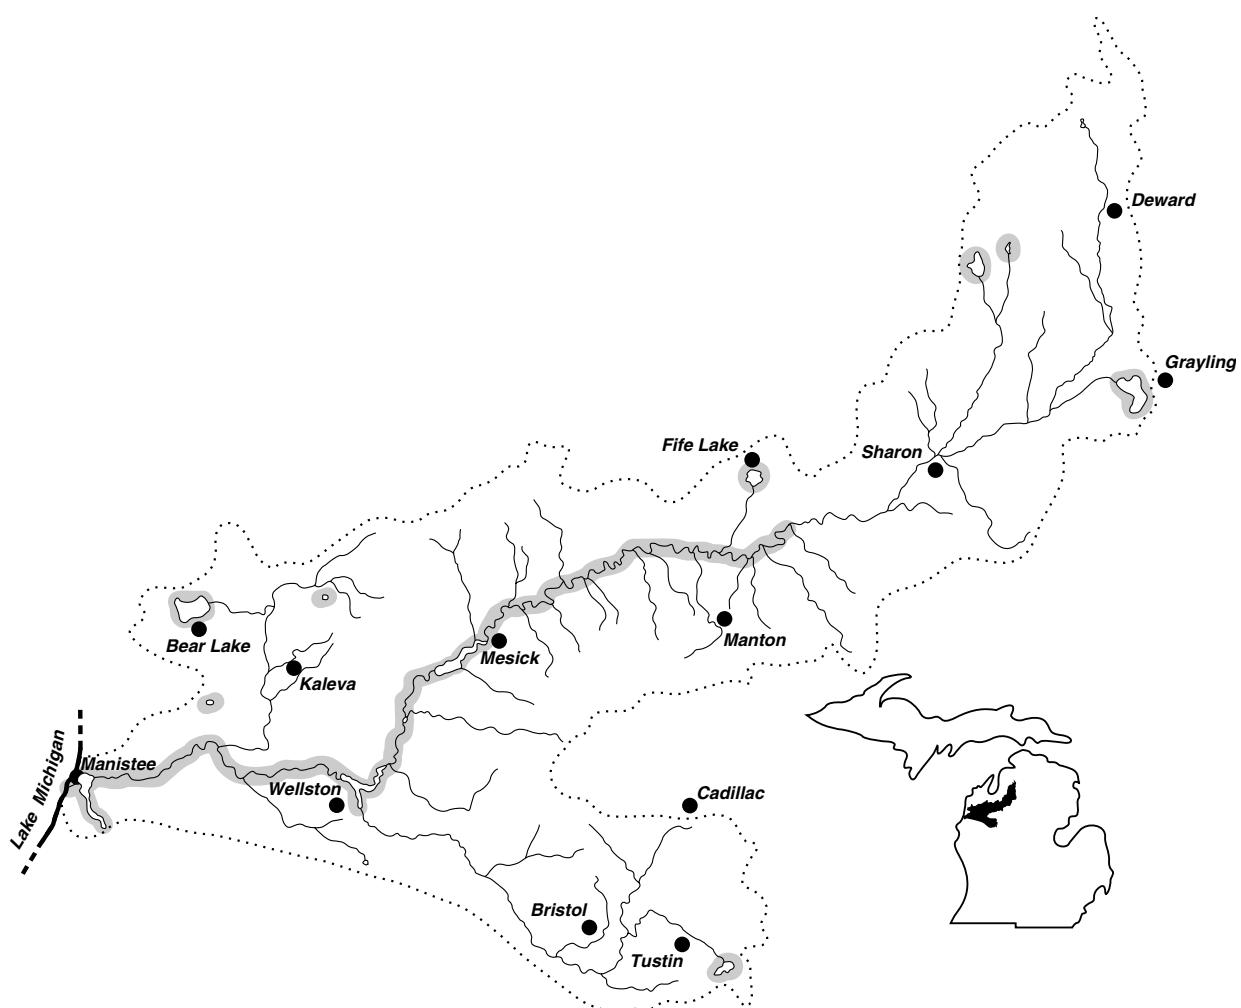

- spawning
  - gravel and sand substrate

## Walleye (*Stizostedion vitreum*)

### Habitat:

- feeding - larger, deeper streams and in large, shallow, turbid lakes and impoundments; also Lake Michigan
- gravel, bedrock, and firm substrates preferred
- does not tolerate a lot of turbidity or low oxygen
  
- spawning - rocky substrates in high gradient water in rivers
- boulder to coarse gravel shoals in lakes
  
- winter refuge - avoids strong currents

**Freshwater drum (*Aplodinotus grunniens*)**

**Habitat:**

feeding - deeper pools of rivers and Lake Michigan  
- in shallows  
- prefers clear waters and clean substrates  
- can adapt to high turbidity levels

spawning - pelagically, in open water, over sand or mud substrate  
- occurs in bays or lower portions of marshes
