NOTE:
 Interior finish to be silver gray stain manufactured by The Pontiac Paint and Varnish Co. known as Silver Gray S.S. Paste #921. This paste is mixed with S.S. Liquid #811 (from the same company) for scuffing and to get desired color shade. Exposed roof rafters to be a deep shade of silver gray. Roof and wall boards to be a very light shade of silver gray permitting the wood grain and knots to show through.
 Finish all stained surfaces with two (2) coats of Satinlac (Satinlac manufactured by U.S. Plywood Corp.)
 The above is for pine wall boards. If cedar paneling is used omit the silver gray stain and apply two (2) coats of Satinlac direct.
 Wax all wall surfaces after Satinlac finish is applied.
 Exterior finish rough saw siding and wood work with #21 Silver Gray Stain Paste (manufactured by The Pontiac Paint and Varnish Co. Pontiac, Mich.) mixed with clear creosote oil. Proportion of mix to be determined on the job striving to obtain an effect similar to weathered gray or an old painted barn.
 Add as much pigment to creosote oil as is possible and still obtain desired weathered gray transparent effect showing grain of wood.
 Roof: Shingles to be stained with Carbo-Sota creosote (by the emersion method)
